Senior Security Engineer, Detection & Response

Detection engineer who treats detections as software: built a Python-based orchestration framework spanning nine SIEM/EDR platforms, ran it through a full CI/CD pipeline with version control, peer review, and staged rollout, and layered threat-intel enrichment and GenAI tooling on top. Comfortable owning the full loop from telemetry pipeline to shipped detection to incident investigation.

CORE SKILLS

Detection Engineering as Software: Python-based detection-as-code orchestration across nine SIEM/EDR platforms via native APIs (Microsoft Sentinel, Microsoft Defender, Google SecOps/Chronicle, Splunk, CrowdStrike, SentinelOne, Sumo Logic, Palo Alto XSIAM, Devo, plus prior ArcSight); full GitLab CI/CD pipeline with automated unit/integration tests, staged/safe rollout, and tracked coverage/precision/false-positive-rate metrics

Telemetry Pipeline & Schema Engineering: Data engineering for 220+ log sources; built a Common Information Model standardizing field names/types across all parsed data; 50+ Logstash filters and Elasticsearch Beats for collection; Apache Beam/GCP Dataflow for historical/cold-storage retrieval; connector/collector health monitoring

Incident Response & Threat Intel Integration: Analytically supports a live SOC's case/incident queue (Treasury SOC); builds detection content directly informed by threat intel (Vedere Labs CTI) rather than passively consuming feeds; enriches alerts with CTI context (actor attribution, known-bad indicators) to speed triage; time-series anomaly detection of entity behavior (auth patterns, process chains) for investigation support

Cloud, IAM & Automation: Hands-on IAM policy/role implementation in AWS and GCP; API token/role/permission management across nine SIEM platforms; event-driven serverless enrichment on GCP; multithreaded parallel deployment; comfortable Docker/container user; production-grade Python, not just scripts

AI-Powered Security Tooling: Production GenAI tooling for false-positive triage and automated detection-content generation/cross-platform rule conversion; reusable GenAI-powered "skills" for detection engineers

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — team lead directing sprint priorities and technical direction for the Splunk-based detection and alerting content a live SOC runs incident investigations against.
- DOE/NNSA Security Data Integration (completed): built a new security data platform from scratch ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the UEBA detection layer, custom dashboards, data transforms, and data-quality monitoring/alerting on top.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team building cloud-based big-data detection content and infrastructure against massive customer telemetry; threat intel sourced from Vedere Labs, Forescout's in-house research team, informed detection tuning.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Architected and built a Python-based detection-as-code orchestration framework across nine SIEM/EDR platforms via native APIs — reusable per-technology adapters for every interaction method (rule management, alerts, tables, schemas) — with multithreading to deploy detection content across many customers in parallel inside a full GitLab CI/CD pipeline, including automated unit/integration tests and staged rollout before full production deployment.
- Data engineering/pipelining for 220+ unique log data sources: 50+ Logstash filters, deployed Elasticsearch Beats for log collection, built a Common Information Model standardizing field names/types across all parsed data, and assisted building 'Loggify,' a homegrown log parsing/filtering tool that replaced Logstash.
- Fetched large volumes of historical cold-storage data using a homegrown Apache Beam program run via GCP Dataflow; built production GenAI tooling for detection-rule generation and cross-platform rule conversion; time-series anomaly detection on entity behavior (process chains, authentication patterns) to support investigations.
- Created and managed API tokens, roles, and permissions across the nine SIEM platforms; created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections on the network; analyzed large-scale security log data to surface anomalous behavior.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Security Engineering Hiring Team
Scale AI

Your posting describes detections as software — version control, peer review, measurable performance. That's exactly how I've operated for the last several years, just across a wider set of platforms than most detection engineers ever touch.

At Trend Micro/Cysiv, I built a Python-based orchestration framework spanning nine SIEM and EDR platforms — Sentinel, Defender, Google SecOps, Splunk, CrowdStrike, SentinelOne, Sumo Logic, XSIAM, and Devo — with reusable per-technology adapters, API-level token/role management, and multithreaded parallel deployment, all running through a full GitLab CI/CD pipeline with automated tests and staged rollout before anything hit production. Underneath that sits telemetry engineering for 220+ log sources and a Common Information Model standardizing schema across all of it — the same mechanics behind mature, low-noise detection at scale.

I currently support Treasury's SOC directly against live incidents, and I build detection content informed by threat intel rather than reacting to it after the fact — pulling CTI to tune rule logic and enrich alerts for faster triage. I've also shipped production GenAI tooling for false-positive triage and automated rule generation, the same class of AI-powered tooling this role is chartered to build and scale.

I'd welcome the chance to talk through how that combination of platform-scale detection engineering, telemetry pipeline ownership, and incident response experience fits Scale AI's security engineering team.
