Security Software Engineer, Detection & Response Platform

Security engineer who has built an internal detection-management platform from scratch: a Python-based orchestration layer spanning nine SIEM/EDR platforms, backed by data pipelines ingesting 220+ log sources and a full GitLab CI/CD delivery pipeline. Comfortable building and scaling services on cloud infrastructure, with production GenAI tooling layered directly on top of the detection platform.

CORE SKILLS

Security Platform Engineering: Architected a Python-based detection-as-code orchestration framework across nine SIEM/EDR platforms via native APIs — effectively an internal detection-management platform/abstraction layer across heterogeneous vendors; API token/role/permission management; multithreaded parallel deployment

Data Pipelines at Scale: Data engineering for 220+ log data sources; built a Common Information Model standardizing field names/types across all parsed data; Apache Beam / GCP Dataflow for historical/cold-storage retrieval; PySpark/SparkSQL and GCP Dataproc for large-scale exploratory analysis

CI/CD & Cloud Services: Full CI/CD pipeline for detection-as-code, run in GitLab, with automated unit/integration tests written against the orchestration framework itself; hands-on IAM policy/role implementation in AWS and GCP; built event-driven serverless enrichment on GCP; comfortable Docker/container user; familiarity with Kafka/Flink streaming pipelines

AI-Powered Security Tooling: Production GenAI tooling for false-positive triage and automated detection-content generation; built reusable GenAI-powered 'skills' for detection engineers to automate repetitive tasks

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — team lead directing sprint priorities and technical direction for the Splunk-based detection and alerting content a live SOC runs incident response against.
- DOE/NNSA Security Data Integration (completed): built a new security data platform from scratch ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the UEBA detection layer, custom dashboards, data transforms, and data-quality monitoring/alerting on top.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team building cloud-based big-data detection content and infrastructure against massive customer telemetry.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Architected and built a Python-based detection-as-code orchestration framework across nine SIEM/EDR platforms via native APIs — developing reusable per-technology adapters for every interaction method (rule management, alerts, tables, schemas) — with multithreading to deploy detection content across many customers in parallel inside a full GitLab CI/CD pipeline.
- Data engineering/pipelining for 220+ unique log data sources: 50+ Logstash filters, deployed Elasticsearch Beats for log collection, built a Common Information Model standardizing field names/types across all parsed data, and assisted building 'Loggify,' a homegrown log parsing/filtering tool that replaced Logstash.
- Fetched large volumes of historical cold-storage data using a homegrown Apache Beam program run via GCP Dataflow; built production GenAI tooling for detection-rule generation and cross-platform rule conversion.
- Created and managed API tokens, roles, and permissions across the nine SIEM platforms; created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections on the network; analyzed large-scale security log data to surface anomalous behavior.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Security Hiring Team

Anthropic

I've effectively built the kind of internal detection platform this role is chartered to create — just across a different set of underlying SIEM vendors rather than a single in-house system.

At Trend Micro/Cysiv, I architected a Python-based orchestration framework spanning nine SIEM and EDR platforms via their native APIs — reusable per-technology adapters, API-level token/role/permission management, and multithreaded parallel deployment across many customers inside a full GitLab CI/CD pipeline. Underneath that platform sits data engineering for 220+ log sources: 50+ parsing filters, a Common Information Model standardizing fields across all of it, and Apache Beam/GCP Dataflow jobs for large-scale historical retrieval.

On top of that foundation, I built production GenAI tooling — automated detection-rule generation, cross-platform rule conversion, and false-positive triage — the same class of AI-powered security tooling this platform is meant to scale.

I'd welcome the chance to talk through how that combination of platform engineering, large-scale data pipelines, and AI-powered detection tooling fits Anthropic's Detection Platform team.
