Security Hiring Team

Anthropic

I've effectively built the kind of internal detection platform this role is chartered to create — just across a different set of underlying SIEM vendors rather than a single in-house system.

At Trend Micro/Cysiv, I architected a Python-based orchestration framework spanning nine SIEM and EDR platforms via their native APIs — reusable per-technology adapters, API-level token/role/permission management, and multithreaded parallel deployment across many customers inside a full GitLab CI/CD pipeline. Underneath that platform sits data engineering for 220+ log sources: 50+ parsing filters, a Common Information Model standardizing fields across all of it, and Apache Beam/GCP Dataflow jobs for large-scale historical retrieval.

On top of that foundation, I built production GenAI tooling — automated detection-rule generation, cross-platform rule conversion, and false-positive triage — the same class of AI-powered security tooling this platform is meant to scale.

I'd welcome the chance to talk through how that combination of platform engineering, large-scale data pipelines, and AI-powered detection tooling fits Anthropic's Detection Platform team.
