Security Engineer, Detection & Response

Security engineer with 10+ years of detection engineering, incident response, and threat hunting — leading sprint priorities for a live SOC's detection content, building production GenAI tooling for triage and investigation, and orchestrating detection-as-code across nine SIEM/EDR platforms. Comfortable across AWS and GCP, with hands-on cloud IAM implementation.

CORE SKILLS

Incident Response & Detection Engineering: Directs detection and alerting content a live SOC runs incident response against; reviews detection quality metrics (coverage, precision/false-positive rate) and drives continuous improvement via staged rollout; 2,300+ detection rules covering most of the MITRE ATT&CK matrix; signature, behavioral, statistical, time-series, and ML-based detection content

LLM-Powered Detection & Response Tooling: Production GenAI tooling for false-positive triage and automated detection-content generation; GenAI-driven SIEM API orchestration; built reusable GenAI-powered 'skills' automating repetitive detection-engineering workflows

Multi-SIEM/EDR Orchestration & CI/CD: Python-based orchestration framework across nine platforms (Sentinel, Defender, Google SecOps, Splunk, CrowdStrike, SentinelOne, Sumo Logic, XSIAM, Devo) via native APIs; multithreaded parallel deployment inside a full GitLab CI/CD pipeline; API-level token/role/permission management

Cloud & Data Engineering: Hands-on IAM policy/role implementation in AWS and GCP; data pipelines ingesting 220+ log sources; hands-on experience working within a Kubernetes-orchestrated platform plus Docker for reproducible detection-testing environments; comfortable with Python and SQL/query languages at scale

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — team lead directing sprint priorities and technical direction for the detection and alerting content a live SOC runs incident response against; owns Incident Response metrics/procedures for that content.
- DOE/NNSA Security Data Integration (completed): built a new security data platform ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the UEBA detection layer, data-quality monitoring, and alerting content on top.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team building signature, behavioral, statistical, time-series, and ML-based detection content against cloud-scale customer telemetry.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Architected and built a Python-based detection-as-code orchestration framework across nine SIEM/EDR platforms via native APIs, with multithreading to deploy and manage detection content across many customers in parallel inside a full GitLab CI/CD pipeline.
- Built production GenAI tooling for security automation: prompt engineering for false-positive triage, automated detection-rule generation, and cross-platform rule conversion — directly analogous to leveraging LLMs to enhance detection, investigation, and response.
- Created and managed API tokens, roles, and permissions across nine SIEM platforms as part of the orchestration framework; investigated anomalous entity behavior at scale for threat hunting (authentication anomalies, process-chain analysis).
- Data engineering for 220+ log sources; created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections on the network; analyzed large-scale security log data to surface anomalous behavior for incident investigation.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Security Hiring Team

Anthropic

Building the detections and playbooks that let a team catch what matters fast, and layering AI onto that work to catch it faster, is exactly the shape of my last decade in security engineering.

I currently direct sprint priorities and technical direction for the detection and alerting content a Treasury SOC runs its incident response against. Earlier, at Trend Micro/Cysiv, I architected a Python-based orchestration framework managing detection-rule lifecycle across nine SIEM and EDR platforms via their native APIs — including API-level token/role/permission management and multithreaded parallel deployment inside a full GitLab CI/CD pipeline — on top of which I created and maintain 2,300+ detection rules covering most of the MITRE ATT&CK matrix.

I've also built production GenAI tooling that triages false positives, generates detection content, and converts rules between SIEM syntaxes automatically — the same direction of using LLMs to enhance detection, investigation, and response that this role is built to lead.

I'd welcome the chance to talk through how that combination of incident response leadership, multi-platform detection engineering, and LLM-driven tooling fits Anthropic's Detection & Response work.
