Security Engineer, Detection & Response

Security engineer with 10+ years building detection content and investigating anomalous entity behavior at scale — authentication anomalies, process-chain analysis, data-movement patterns — plus production GenAI tooling for automated triage. Comfortable across macOS/Windows/Linux endpoints and multi-cloud infrastructure, with Python as a daily working language.

CORE SKILLS

Entity-Behavior Detection & Investigation: Time-series anomaly detection: authentication attempts by country/volume, parent/child process chains, Outlook process-chain analysis; DNS-based malware detection and mitigation; deep log/telemetry investigation to validate hypotheses and reach root cause

AI-Accelerated Investigation Tooling: Production GenAI tooling for false-positive triage and automated detection-content generation; built reusable GenAI-powered 'skills' for detection engineers to automate repetitive investigative tasks

Cross-Platform Detection Engineering: 2,300+ detection rules across the MITRE ATT&CK matrix; multi-SIEM/EDR orchestration (CrowdStrike, SentinelOne, Splunk, Google SecOps, and six others) via native APIs; formally tracks detection quality metrics and tunes rules for sustainable operations; hands-on experience working within a Kubernetes-orchestrated platform plus comfortable Docker/container use

Data Engineering & Scripting: Python-based automation and orchestration; data pipelines ingesting 220+ log sources; GitLab CI/CD for detection-as-code; cloud IAM policy/role implementation in AWS and GCP

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — direct sprint priorities and technical direction for the detection and alerting content a live SOC runs incident response against.
- DOE/NNSA Security Data Integration (completed): built a new security data platform ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the UEBA entity-behavior detection layer on top — purpose-built to catch anomalous access and data-movement patterns.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team building signature, behavioral, statistical, and ML-based detection content against cloud-scale customer telemetry.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Investigated anomalous entity behavior at scale: authentication-attempt anomalies by country/volume, parent/child process chains, and Outlook process-chain analysis — the same behavioral-analytics techniques central to detecting access abuse and data exfiltration.
- Built production GenAI tooling for security automation: prompt engineering for false-positive triage and automated detection-rule generation, reducing manual investigation toil.
- Architected a Python-based detection-as-code orchestration framework across nine SIEM/EDR platforms via native APIs, including token/role/permission management at the API level, inside a full GitLab CI/CD pipeline.
- Data engineering for 220+ log sources; created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections on the network; analyzed large-scale security log data to surface anomalous behavior.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Security Hiring Team

OpenAI

Spotting the anomaly that matters inside a sea of normal behavior — and proving it out fast — is the core skill I've built a career on, and it's the same instinct insider-risk investigations depend on.

At Trend Micro/Cysiv, I investigated anomalous entity behavior at scale for threat hunting and incident support: authentication-attempt anomalies by country and volume, parent/child process chains, and Outlook process-chain analysis — the same class of behavioral analytics that surfaces access abuse and unusual data movement. I built that analysis on top of a Python-based detection-as-code framework I architected across nine SIEM/EDR platforms, and created 2,300+ detection rules covering most of the MITRE ATT&CK matrix.

I've also shipped production GenAI tooling for security automation — prompt engineering for triage and automated detection-content generation — cutting the manual work out of investigations, which is exactly the kind of AI-assisted leverage this role is chartered to bring to insider-threat work.

I'd welcome the chance to talk through how that combination of entity-behavior investigation, detection engineering, and AI-driven tooling fits OpenAI's insider-threat program.
