Senior Security Incident Commander

Security engineer with 10+ years of hands-on technical investigation, MITRE ATT&CK-aligned detection content, and entity-behavior threat hunting supporting live SOC incident response — plus production GenAI tooling for automated triage and investigation. Currently directs sprint priorities and technical direction for the detection and alerting content a Treasury SOC runs incident response against.

CORE SKILLS

Technical Investigation & Threat Hunting: Deep, hands-on log/telemetry analysis to validate hypotheses and determine root cause; entity-behavior time-series anomaly detection (authentication anomalies by country/volume, parent/child process chains, Outlook process-chain analysis); DNS-based malware detection and mitigation

MITRE ATT&CK-Aligned Detection Content: Created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix; signature, behavioral, statistical, time-series, and ML-based detection content across cloud-scale customer data

AI-Driven Response Tooling: Production GenAI tooling for false-positive triage and automated detection-content generation; GenAI-driven SIEM API orchestration across nine platforms to speed investigation and response workflows

SOC-Facing Technical Leadership: Team-lead/sprint-lead directing detection and alerting priorities for a live SOC's incident response program; Python, GitLab CI/CD, multi-SIEM/EDR platform engineering (CrowdStrike, SentinelOne, Splunk, Google SecOps, and six others)

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — team lead directing sprint priorities and technical direction for the detection and alerting content (Splunk) a live SOC runs incident response against.
- DOE/NNSA Security Data Integration (completed): built a new security data platform ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the UEBA detection layer on top — entity-behavior analytics purpose-built for proactive threat hunting and investigation.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team building signature, behavioral, statistical, time-series, and ML-based detection content against cloud-scale customer data supporting downstream incident response and investigation.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Architected and built a Python-based detection-as-code orchestration framework across nine SIEM/EDR platforms — including CrowdStrike, SentinelOne, and Google SecOps (Chronicle) — via native APIs, with multithreading to deploy and manage detection content across many customers in parallel inside a full GitLab CI/CD pipeline.
- Investigated anomalous entity behavior at scale for threat hunting and incident support: authentication-attempt anomalies by country/volume, parent/child process chains, and Outlook process-chain analysis.
- Built production GenAI tooling for security automation: prompt engineering for false-positive triage, automated detection-rule generation, and cross-platform rule conversion.
- Created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections on the network; analyzed large-scale security log data to surface anomalous behavior for incident investigation.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Incident Command Hiring Team

Uber

Getting to root cause fast, under pressure, with incomplete information is the daily reality of detection engineering work — and it's the same instinct this role is built around at a much larger scale.

I currently direct sprint priorities and technical direction for the detection and alerting content a Treasury SOC runs its incident response against, and built the entity-behavior analytics layer (UEBA) on top of a from-scratch security data platform for DOE/NNSA — purpose-built for proactive threat hunting. Earlier, at Trend Micro/Cysiv, I investigated anomalous entity behavior at scale for threat hunting and incident support: authentication anomalies by country and volume, parent/child process chains, and Outlook process-chain analysis, on top of 2,300+ detection rules I created and managed covering most of the MITRE ATT&CK matrix.

I've also built production GenAI tooling for security automation — prompt engineering for triage and automated detection-rule generation — the same class of AI-assisted investigation and response tooling this role is chartered to mature.

I'd welcome the chance to talk through how that combination of deep technical investigation, MITRE ATT&CK-aligned detection engineering, and AI-driven tooling fits Uber's incident response program.
