## Senior Staff Security Engineer — Enterprise Security, Endpoint & Vulnerability Platforms

Security engineer with 10+ years building detection content, vulnerability data analytics, and cloud IAM programs — with production GenAI experience automating security workflows and a track record directing sprint priorities and technical direction for a live SOC's detection program. Architected a Python-based orchestration framework spanning nine SIEM/EDR platforms, hands-on IAM implementation across AWS and GCP, and vulnerability data pipelines built on Tenable scan data.

### CORE SKILLS

---

**AI-Driven Security Automation:** Prompt engineering for triage and detection-content generation; GenAI-driven SIEM API orchestration; applying frontier AI to reduce human-driven security workflows to automated ones

**Vulnerability & Endpoint Security Data:** Tenable vulnerability scan ingestion into SIEM/analytics platforms with custom detection content built on top; vulnerability exposure evaluation across production environments; multi-vendor security control evaluation

**Cloud IAM & Access Governance:** Hands-on IAM policy/role implementation in AWS and GCP; created and managed API tokens, roles, and permissions across nine SIEM/EDR platforms as part of a detection-as-code orchestration framework

**Engineering & Technical Leadership:** Python (production, multithreaded API orchestration), GitLab CI/CD, Docker, team-lead/sprint-lead experience directing detection priorities and technical direction for a live SOC

### PROFESSIONAL EXPERIENCE

---

#### Senior Security Engineer — Shorepoint

*Oct 2023 – Present*

- Treasury SOC (TSSOC), Threat & Research team — serve as team lead directing sprint priorities and technical direction for the detection and alerting content (Splunk) a live SOC runs incident response against.
- DOE/NNSA Security Data Integration (completed): built a new security data platform ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the UEBA detection layer on top — entity-behavior analytics purpose-built for proactive threat hunting.
- CISA CDM at DOE (completed): data ingestion and quality work across a combined Elasticsearch and Splunk environment.

#### Senior Threat Detection Engineer & Data Scientist — Forescout

*Aug 2022 – Oct 2023*

- Senior member of the detection engineering/data science team building signature, behavioral, statistical, time-series, and ML-based detection content against cloud-scale customer data.
- Evaluated vulnerability exposure and security controls across production environments, including ingestion of Tenable vulnerability scan data into analytics platforms for detection-content development.

#### Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

*Sep 2018 – Aug 2022*

- Architected and built a Python-based detection-as-code orchestration framework across nine SIEM/EDR platforms — including CrowdStrike, SentinelOne, and Google SecOps (Chronicle) — via native APIs, implementing multithreading to deploy and manage detection content across many customers in parallel inside a full GitLab CI/CD pipeline.
- Created and managed API tokens, roles, and IAM permissions across all nine platforms as part of building that framework — hands-on access-management work at the API level, plus separate IAM policy/role implementation experience in AWS and GCP.
- Built production GenAI tooling for security automation: prompt engineering for false-positive triage, automated detection-rule generation, and cross-platform rule conversion.
- Created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix.

#### Security Data Scientist — Experian

*Jan 2015 – Jan 2018*

- Built DNS-based detection and mitigation for malware infections on the network; analyzed large-scale security log data to surface anomalous behavior.

### EDUCATION & CERTIFICATIONS

---

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Enterprise Security Hiring Team

Uber

Transforming enterprise defense from human-driven to AI-driven is exactly the direction I've built my last several years toward — moving from manual detection content and vulnerability triage to production GenAI tooling that automates both.

At Trend Micro/Cysiv, I architected a Python-based detection-as-code orchestration framework spanning nine SIEM/EDR platforms — including CrowdStrike, SentinelOne, and Google SecOps (Chronicle) — integrated via native APIs, with multithreading to deploy detection content across many customers in parallel inside a full GitLab CI/CD pipeline. Building that framework meant creating and managing API tokens, roles, and IAM permissions across all nine platforms, plus separate hands-on IAM policy and role implementation in both AWS and GCP.

On the vulnerability and endpoint side, I've ingested Tenable vulnerability scan data into analytics platforms and built detection content on top of it, and evaluated vulnerability exposure and security controls across production environments. I also built production GenAI tooling — prompt engineering for triage and automated detection-rule generation — and currently direct sprint priorities and technical direction for the Treasury SOC's detection team.

I'd welcome the chance to talk through how that combination of AI-driven automation, multi-platform security engineering, and hands-on IAM and vulnerability data work fits the Enterprise Security team's roadmap.
