Staff Security Engineer — Detection & Response, AI-Driven Threat Hunting

Security engineer with 10+ years building detection content, threat-hunting analytics, and incident-response tooling — with production GenAI experience automating triage and detection generation well past scripting. Built and operated a multithreaded, API-driven orchestration framework across nine SIEM/EDR platforms including CrowdStrike, SentinelOne, Splunk, and Google SecOps (Chronicle), and has led sprint planning and technical direction for a live SOC's detection team.

CORE SKILLS

AI-Driven Security Automation: Prompt engineering for false-positive triage and detection-content generation; GenAI-driven SIEM API orchestration; reusable GenAI-powered tooling for cross-platform detection-rule conversion

Threat Hunting & Investigation: Entity-behavior time-series anomaly detection (authentication anomalies by country/volume, parent/child process chains), DNS-based malware detection and mitigation, MITRE ATT&CK-aligned detection content

SIEM / EDR Platforms: CrowdStrike, SentinelOne, Splunk, Google SecOps (Chronicle), Microsoft Sentinel, Microsoft Defender, Sumo Logic, Palo Alto XSIAM, Devo, ArcSight — native API integration across all nine

Engineering & Technical Leadership: Python (production, multithreaded API orchestration), GitLab CI/CD, team-lead/sprint-lead experience directing detection priorities for a live SOC, AWS/GCP/Azure

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — serve as team lead directing sprint priorities and technical direction for the detection and alerting content (Splunk) a live SOC runs incident response against.
- DOE/NNSA Security Data Integration (completed): built a new security data platform ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the UEBA detection layer on top — entity-behavior analytics purpose-built for proactive threat hunting.
- CISA CDM at DOE (completed): data ingestion and quality work across a combined Elasticsearch and Splunk environment.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team building signature, behavioral, statistical, time-series, and ML-based detection content against cloud-scale customer data.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Architected and built a Python-based detection-as-code orchestration framework across nine SIEM/EDR platforms — including CrowdStrike, SentinelOne, and Google SecOps (Chronicle) — via native APIs, implementing multithreading to deploy and manage detection content across many customers in parallel inside a full GitLab CI/CD pipeline.
- Created and managed API tokens, roles, and permissions across all nine platforms as part of building that framework — hands-on access-management work at the API level.
- Built production GenAI tooling for security automation: prompt engineering for false-positive triage, automated detection-rule generation, and cross-platform rule conversion.
- Investigated anomalous entity behavior at scale for threat hunting: authentication-attempt anomalies by country/volume, parent/child process chains, and Outlook process-chain analysis.
- Created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections on the network; analyzed large-scale security log data to surface anomalous behavior.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Cyber Defense Hiring Team
Uber

Defending at machine speed against AI-driven adversaries is exactly the shift I've spent the last several years building toward — moving from manual detection content to production GenAI tooling that automates triage and response.

At Trend Micro/Cysiv, I architected a Python-based detection-as-code orchestration framework spanning nine SIEM/EDR platforms — including CrowdStrike, SentinelOne, Splunk, and Google SecOps (Chronicle) — all integrated via native APIs, with multithreading to deploy detection content across many customers in parallel inside a full GitLab CI/CD pipeline. On top of that framework, I built production GenAI tooling: prompt engineering for false-positive triage, automated detection-rule generation, and cross-platform rule conversion — the same class of AI-driven automation this role is built to scale.

My threat-hunting background is hands-on and proactive: investigating anomalous entity behavior at scale (authentication anomalies by country and volume, parent/child process chains) and building the UEBA detection layer on top of a from-scratch security data platform for DOE/NNSA. I currently lead sprint planning and technical direction for the Treasury SOC's detection team, and created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix over my career.

I'd welcome the chance to talk through how that combination of AI-driven automation, multithreaded systems engineering, and hands-on threat hunting fits Uber's Cyber Defense roadmap.
