Staff Security Engineer — Vulnerability Management

Security engineer with 10+ years building detection and vulnerability data platforms at cloud scale — including Tenable vulnerability scan ingestion into SIEM/analytics platforms with custom detection content on top, a Python-based orchestration framework spanning nine SIEM/EDR platforms, and production GenAI tooling for automated triage. Comfortable, hands-on Docker user with a full GitLab CI/CD pipeline background for shipping detection-as-code.

CORE SKILLS

Vulnerability Management & Security Data Engineering: Tenable vulnerability scan ingestion into SIEM/analytics platforms; detection content built directly on top of vulnerability scan data; vulnerability exposure evaluation across production environments; multi-vendor security control evaluation

AI-Driven Triage & Automation: Prompt engineering for false-positive triage and detection-content generation; GenAI-driven SIEM API orchestration; reusable GenAI-powered tooling for cross-platform rule conversion

Platform Engineering at Scale: Python-based orchestration framework across nine SIEM/EDR platforms (CrowdStrike, SentinelOne, Splunk, Google SecOps, Microsoft Sentinel/Defender, Sumo Logic, Palo Alto XSIAM, Devo) via native APIs; multithreaded parallel deployment across many customers; full GitLab CI/CD pipeline

Cloud, Containers & Access: AWS/GCP/Azure; hands-on IAM policy/role implementation in AWS and GCP; Docker (comfortable, hands-on user — managed containers/images, built reproducible detection-testing environments)

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — team lead directing sprint priorities and technical direction for the detection and alerting content (Splunk) a live SOC runs incident response against.
- DOE/NNSA Security Data Integration (completed): built a new security data platform ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the UEBA detection layer on top.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Evaluated vulnerability exposure and security controls across production environments, including ingestion of Tenable vulnerability scan data into analytics platforms with detection content built directly on top of that data.
- Senior member of the detection engineering/data science team building signature, behavioral, statistical, time-series, and ML-based detection content against cloud-scale customer data.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Architected and built a Python-based detection-as-code orchestration framework across nine SIEM/EDR platforms via native APIs, implementing multithreading to deploy and manage detection content across many customers in parallel inside a full GitLab CI/CD pipeline.
- Created and managed API tokens, roles, and IAM permissions across all nine platforms, plus separate IAM policy/role implementation experience in AWS and GCP.
- Built production GenAI tooling for security automation: prompt engineering for false-positive triage, automated detection-rule generation, and cross-platform rule conversion.
- Used Docker to build reproducible containerized environments for testing detection content against real log data.
- Created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections on the network; analyzed large-scale security log data to surface anomalous behavior.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Vulnerability Management Hiring Team

Uber

Turning raw vulnerability scan data into detection content teams can actually act on is work I've been doing for years — and I'd love to bring that same data-engineering lens to Uber's Vulnerability Management Platform.

At Forescout, I evaluated vulnerability exposure and security controls across production environments, ingesting Tenable vulnerability scan data into analytics platforms and building detection content directly on top of it. At Trend Micro/Cysiv, I architected a Python-based orchestration framework spanning nine SIEM/EDR platforms via native APIs, with multithreading to deploy detection content across many customers in parallel inside a full GitLab CI/CD pipeline — the same shift-left, automate-everything mindset this role calls for.

I've also built production GenAI tooling for security automation — prompt engineering for triage and automated rule generation — and have hands-on IAM implementation experience in both AWS and GCP. I currently direct sprint priorities and technical direction for the Treasury SOC's detection team.

I'd welcome the chance to talk through how that combination of vulnerability data engineering, multi-platform orchestration, and AI-driven automation fits the RBVM roadmap.
