Security Engineering Lead — Cloud & Data Security

Security engineer with 10+ years building and leading detection, data-security, and cloud-IAM work across AWS and GCP — including hands-on IAM policy/role implementation and creating/managing API tokens, roles, and permissions across nine SIEM platforms. Team-lead/sprint-lead experience directing technical priorities for a live SOC. Builds production AI/GenAI tooling to scale security operations.

CORE SKILLS

Cloud & Data Security: Hands-on IAM policy/role implementation in AWS and GCP; data security and access-control work across SIEM/Elasticsearch platforms; created and managed API tokens, roles, and permissions across nine SIEM platforms as part of a detection orchestration framework

Detection & Prevention Controls: 2,300+ detection rules covering most of the MITRE ATT&CK matrix; cloud-native and endpoint telemetry detection content; formally tracks detection quality metrics (coverage, precision/false-positive rate) with staged rollout before full production

Containers & Infrastructure: Comfortable, hands-on Docker user managing containers/images for reproducible detection-testing environments; has worked within a Kubernetes-orchestrated platform (user of the platform, not cluster administration); GitLab CI/CD as the backbone for detection-as-code pipelines

Multi-SIEM Orchestration & AI Tooling: Built rule-lifecycle orchestration across nine SIEM/EDR platforms (Microsoft Sentinel, Defender, Google SecOps/Chronicle, Splunk, CrowdStrike, SentinelOne, Sumo Logic, Palo Alto XSIAM, Devo) via native APIs; multithreaded parallel deployment; production GenAI tooling for triage, detection-rule generation, and cross-platform rule conversion

Leadership & Partnership: Team-lead/sprint-lead experience directing technical priorities and mentoring detection engineers; embedded-partner track record working directly with SOC, IR, and platform teams to ship secure-by-default detection content

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — directs sprint priorities and technical direction for the Splunk-based detection and alerting content a live SOC runs incident response against.
- DOE/NNSA Security Data Integration (completed): built a new security data platform ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the UEBA detection layer, data-quality monitoring, and alerting content on top — real hands-on data-security and access-governance work on a platform other teams built on.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team building signature, behavioral, statistical, time-series, and ML-based detection content against cloud-scale customer telemetry.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Architected and built a Python-based detection-as-code orchestration framework across nine SIEM/EDR platforms via native APIs — including creating and managing API tokens, roles, and permissions at the API level, and multithreaded parallel deployment across many customers inside a full GitLab CI/CD pipeline.
- Implemented AWS and GCP IAM policies and roles as part of the platform's identity and access-management footprint.
- Built production GenAI tooling for security automation: prompt engineering for false-positive triage, automated detection-rule generation, and cross-platform rule conversion; developed reusable GenAI-powered 'skills' for detection engineers to automate repetitive tasks.
- Data engineering for 220+ log data sources feeding the detection platform; used Docker for reproducible detection-testing environments; created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections on the network; analyzed large-scale security log data to surface anomalous behavior.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Security Engineering Hiring Team
Airbnb

Securing the infrastructure and data platforms that everything else runs on is quieter work than detection and response, but it's the same discipline: understand the system, find the gap, build the control that closes it without getting in engineers' way.

At Trend Micro/Cysiv, I built a Python-based orchestration framework managing detection-rule lifecycle across nine SIEM and EDR platforms via their native APIs — which meant creating and managing API tokens, roles, and permissions across every one of those platforms, real hands-on identity and access-management work at the API level. I've implemented IAM policies and roles directly in both AWS and GCP, and built production GenAI tooling that automates triage and detection-content generation, cutting manual effort out of security operations.

Today at Shorepoint, I direct the technical priorities for the detection and alerting content a live SOC runs its incident response against, and earlier built an entire security data platform from scratch for DOE/NNSA — ingesting CrowdStrike, Suricata, and Zeek telemetry into Elasticsearch and layering data-quality monitoring and access governance on top. I'd welcome the chance to bring that same builder-and-partner instinct to Airbnb's Cloud & Data Security team.
