## Security Engineering Lead — Detection, Response & CI/CD Security

Security engineer with 10+ years leading detection-and-response engineering and technical sprint priorities for a live SOC, building CI/CD-integrated detection-as-code across nine SIEM/EDR platforms, and implementing IAM policy/role work in AWS and GCP. Team-lead/sprint-lead experience mentoring detection engineers and coordinating cross-team technical priorities.

### CORE SKILLS

---

**Detection & Response:** Creates and manages the detection and alerting content a live SOC runs incident response against (Splunk); 2,300+ detection rules covering most of the MITRE ATT&CK matrix; signature, behavioral, statistical, time-series, and ML-based detection across nine SIEM/EDR platforms including CrowdStrike and SentinelOne

**CI/CD & Detection-as-Code Security:** Full CI/CD pipeline for detection-as-code in GitLab; writes automated unit/integration tests for the pipeline itself; formally tracks detection quality metrics (coverage, precision/false-positive rate) with staged rollout before full production

**Identity & Access Management:** Hands-on IAM policy/role implementation in AWS and GCP; created and managed API tokens, roles, and permissions across nine SIEM platforms as part of a detection orchestration framework

**Sprint & Technical Leadership:** Team-lead/sprint-lead experience directing sprint priorities and technical direction for a live SOC's detection content; mentors detection engineers; embedded partner working directly with SOC, IR, and platform teams

**Containers & Cloud:** Comfortable, hands-on Docker user; has worked within a Kubernetes-orchestrated platform; familiar with AWS and GCP cloud environments; production GenAI tooling for security automation and triage

### PROFESSIONAL EXPERIENCE

---

#### Senior Security Engineer — Shorepoint

*Oct 2023 – Present*

- Treasury SOC (TSSOC), Threat & Research team — directs sprint priorities and technical direction for the Splunk-based detection and alerting content a live SOC runs incident response against.
- DOE/NNSA Security Data Integration (completed): built a new security data platform ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the UEBA detection layer, data-quality monitoring, and alerting content on top.

#### Senior Threat Detection Engineer & Data Scientist — Forescout

*Aug 2022 – Oct 2023*

- Senior member of the detection engineering/data science team building signature, behavioral, statistical, time-series, and ML-based detection content against cloud-scale customer telemetry.

#### Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

*Sep 2018 – Aug 2022*

- Architected and built a Python-based detection-as-code orchestration framework across nine SIEM/EDR platforms (including CrowdStrike and SentinelOne) via native APIs, with multithreading to deploy detection content across many customers in parallel inside a full GitLab CI/CD pipeline — including automated tests for the pipeline itself.
- Created and managed API tokens, roles, and permissions across those nine platforms, and implemented AWS/GCP IAM policies and roles as part of the platform's access-management footprint.
- Built production GenAI tooling for security automation: prompt engineering for false-positive triage, automated detection-rule generation, and cross-platform rule conversion.
- Data engineering for 220+ log data sources feeding the detection platform; used Docker for reproducible detection-testing environments; created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix.

#### Security Data Scientist — Experian

*Jan 2015 – Jan 2018*

- Built DNS-based detection and mitigation for malware infections on the network; analyzed large-scale security log data to surface anomalous behavior.

### EDUCATION & CERTIFICATIONS

---

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Security Engineering Hiring Team  
Reverb

Musical instruments and detection engineering don't obviously belong in the same sentence, but the underlying job is familiar: protect a platform people trust, without slowing down the teams building on top of it.

At Trend Micro/Cysiv, I built a Python-based detection-as-code orchestration framework spanning nine SIEM and EDR platforms — including CrowdStrike and SentinelOne — via their native APIs, run inside a full GitLab CI/CD pipeline with automated tests for the pipeline itself and staged rollout before full production. That work included creating and managing API tokens, roles, and permissions across every one of those platforms, plus hands-on IAM policy and role implementation in both AWS and GCP.

Today at Shorepoint, I direct sprint priorities and technical direction for the detection and alerting content a live SOC runs its incident response against for Treasury — the same rhythm of sprint planning, prioritization, and cross-team coordination this role is built around. I'd welcome the chance to bring that combination of hands-on detection engineering and sprint leadership to Reverb's Security Engineering team.
