Senior Detection Engineer — Threat Intelligence & Detection Content

Security engineer integrating threat intelligence into detection engineering — using CTI (indicators, TTPs, actor/campaign context) to tune detection logic and enrich alerts, on top of a decade building detection-as-code across cloud and endpoint telemetry. Builds production AI/GenAI tooling for triage, signal enrichment, and detection-content generation. Hands-on across AWS, GCP, and multi-cloud identity.

CORE SKILLS

Threat Intelligence Integration: Integrates CTI into detection rule logic and alert enrichment — actor/campaign context and indicators used to tune detections and speed triage; uses threat intel directly for own research during investigations and false-positive analysis; worked across paid/commercial, open-source, and home-grown intel (Forescout's Vedere Labs threat research team)

AI-Assisted Security Workflows: Production GenAI tooling for alert triage, false-positive analysis, automated detection-rule generation, and cross-SIEM rule-syntax conversion; prompt engineering for security use cases; GenAI-driven SIEM API orchestration

Multi-SIEM Detection-as-Code Orchestration: Built rule-lifecycle orchestration across nine SIEM/EDR platforms (Microsoft Sentinel, Defender, Google SecOps/Chronicle, Splunk, CrowdStrike, SentinelOne, Sumo Logic, Palo Alto XSIAM, Devo) via native APIs; multithreaded parallel deployment inside a full GitLab CI/CD pipeline; formally tracks detection quality metrics (coverage, precision/false-positive rate) with staged rollout before full production

Cloud & Data at Scale: Python and SQL against large security datasets; hands-on IAM policy/role implementation in AWS and GCP; PySpark/Dataprox/BigQuery for exploratory analysis at scale; created and managed API tokens, roles, and permissions across nine SIEM platforms

Detection Engineering & Threat Hunting: 2,300+ detection rules covering most of the MITRE ATT&CK matrix; signature, behavioral, statistical, time-series, and ML-based detection; time-series anomaly detection of entity behaviors (auth, process chains); team-lead/sprint-lead experience mentoring detection engineers

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — creates and manages the Splunk-based detection and alerting content a live SOC runs incident response against, incorporating threat intel context into detection logic and case enrichment to speed triage.
- DOE/NNSA Security Data Integration (completed): built a new security data platform ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the UEBA detection layer, data-quality monitoring, and alerting content on top.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team; drew on threat intel from Vedere Labs (Forescout's in-house research team) plus paid and open-source CTI to build signature, behavioral, statistical, time-series, and ML-based detection content at cloud scale.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Architected and built a Python-based detection-as-code orchestration framework across nine SIEM/EDR platforms via native APIs, with multithreading to deploy and manage detection content across many customers in parallel inside a full GitLab CI/CD pipeline.
- Used threat intelligence (indicators, TTPs, actor/campaign context) to tune detection rule logic and enrich alerts, and to validate true-positive vs. false-positive findings during investigations across 2,300+ detection rules covering most of the MITRE ATT&CK matrix.
- Built production GenAI tooling for security automation: prompt engineering for false-positive triage, automated detection-rule generation, and cross-platform rule conversion; developed reusable GenAI-powered 'skills' for detection engineers to automate repetitive tasks.
- Data engineering for 220+ log data sources feeding the detection platform; 50+ Logstash filters; created and managed API tokens, roles, and permissions across nine SIEM platforms as part of the orchestration framework.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections on the network; analyzed large-scale security log data to surface anomalous behavior.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Global Security Hiring Team

Snowflake

Threat intelligence is only as useful as what it changes downstream — the detection it tunes, the alert it enriches, the investigation it speeds up. That's the seam I've worked in for the past decade: turning intelligence into concrete defensive outcomes rather than treating it as a feed to file away.

At Trend Micro/Cysiv, I used threat intel — indicators, TTPs, actor and campaign context — to tune detection rule logic and enrich alerts across a library of 2,300+ detection rules covering most of the MITRE ATT&CK matrix, and to validate true-positive versus false-positive findings during my own investigations. On top of that, I built a Python-based orchestration framework managing detection-rule lifecycle across nine SIEM and EDR platforms via their native APIs, and shipped production GenAI tooling that automates false-positive triage, detection-content generation, and rule conversion between platforms — exactly the kind of AI-assisted intelligence workflow this role is chartered to build.

At Forescout, I worked alongside intelligence from Vedere Labs — the company's in-house threat research team — plus paid/commercial and open-source CTI, giving me exposure to how varied intelligence sources get curated, evaluated, and turned into something detection engineers can actually use. Today at Shorepoint, I create and manage the detection and alerting content a live SOC runs its incident response against for Treasury, folding threat intel context into that content along the way. I'd welcome the chance to bring that same intelligence-to-detection instinct to Snowflake's Threat Intelligence program.
