Senior Detection Engineer — Detection, Response & Threat Intelligence

11+ years building detection engineering programs and incident-response-supporting analytics, from an early-stage startup rules engine (2,300+ rules across the MITRE ATT&CK matrix) to currently owning detection content for a live federal SOC's incident response. Deep multi-SIEM/EDR orchestration experience (nine platforms including CrowdStrike) plus hands-on GenAI-powered detection automation.

CORE SKILLS

Detection Engineering & Incident Response: Automated detection system design across Splunk, ELK/Elasticsearch, CrowdStrike, SentinelOne, Microsoft Sentinel/Defender, Google SecOps, Sumo Logic, Palo Alto XSIAM, Devo, ArcSight; MITRE ATT&CK; incident-response support for a live SOC; large-scale security logging infrastructure

Threat Intelligence & Correlation: Correlating telemetry across identity, cloud, and network sources to detect post-entry behavior; signature, statistical, behavioral, and ML-based detection logic; UEBA detection content

Automation & Engineering: Python, SQL; GitLab CI/CD detection-as-code pipelines; GenAI-powered automated detection systems — false-positive triage, new detection generation, cross-SIEM rule conversion

Cloud & Data Science: AWS, GCP, Azure; clustering/unsupervised ML, time-series anomaly detection

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — own the detection and alerting content (Splunk saved searches) that drives the SOC's live incident response, day to day.
- DOE/NNSA Security Data Integration (completed): built a new security data platform ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the full detection/analytics layer on top — dashboards, data transforms, UEBA content, data-quality alerting.
- CISA CDM at DOE (completed): data ingestion and quality work across a combined Elasticsearch and Splunk environment.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team building signature, behavioral, statistical, time-series, and ML-based detection content against cloud-scale customer data.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Built automated detection systems and orchestration across nine SIEM/EDR platforms — including CrowdStrike — via native APIs, delivered through a full GitLab CI/CD pipeline; created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix.
- Developed GenAI-powered tooling for automated false-positive triage, new detection-content generation, and cross-SIEM rule conversion for other detection engineers.
- Data engineering/pipelining for 220+ log sources; led exploratory data analysis at scale using GCP Dataproc, PySpark/SparkSQL.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections; analyzed large-scale security log data to surface anomalous behavior.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Security, Detection & Response Team
HubSpot

Building detection foundations and response systems that scale with an organization — rather than growing headcount to match alert volume — is the exact model I've run for the last 11 years, most recently supporting live incident response for a federal SOC.

At Trend Micro/Cysiv, I built automated detection systems and orchestration across nine SIEM and EDR platforms, including CrowdStrike, through their native APIs, delivered via a full GitLab CI/CD pipeline, and created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix. I paired that with GenAI-powered automation for false-positive triage and detection-content generation, giving the team leverage without proportional headcount growth — the same automated-detection scaling model this role centers on.

Currently at Shorepoint, I own the detection and alerting content that Treasury's SOC runs live incident response against, and I previously built an entire security data platform for DOE/NNSA from raw log ingestion (CrowdStrike, Suricata, Zeek) through a full UEBA detection layer — correlating telemetry across cloud, identity, and endpoint sources to catch post-entry behavior, not just individual signatures.

I'd welcome the chance to talk through how that detection-and-response background fits HubSpot's roadmap.
