Senior Detection Engineer — Detection-as-Code & Threat Hunting

Senior detection engineer with 10+ years building detection-as-code pipelines, multi-cloud/EDR telemetry coverage, and MITRE ATT&CK-mapped detection content. Built and version-controlled 2,300+ detection rules through a full GitLab CI/CD pipeline across nine SIEM/EDR platforms; currently own live SOC detection content for a federal incident-response team.

CORE SKILLS

Detection-as-Code & CI/CD: Full GitLab CI/CD pipeline for detection content — version control, peer review, automated testing, deployment; reusable per-SIEM API adapters across CrowdStrike, SentinelOne, Splunk, Microsoft Sentinel/Defender, Google SecOps, Sumo Logic, Palo Alto XSIAM, Devo, ArcSight

Multi-Cloud & Endpoint Telemetry: AWS, GCP, Azure; endpoint/EDR telemetry via CrowdStrike and SentinelOne; MITRE ATT&CK coverage mapping across most of the matrix

Detection Engineering & Threat Hunting: Signature, statistical, behavioral, aggregation/threshold, and ML-based detection rule development; time-series anomaly detection of entity behaviors (process chains, authentication patterns); UEBA content

Automation & Scripting: Python, SQL; GenAI-powered false-positive triage and cross-platform rule-conversion tooling; Docker for reproducible detection-testing environments

Data Engineering: 220+ log-source pipelines, Common Information Model design, PySpark/Dataproc/BigQuery/Dataflow for large-scale investigative data pulls

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — own the detection and alerting content (Splunk saved searches) the SOC runs day-to-day incident response against.
- DOE/NNSA Security Data Integration (completed): built a new security data platform ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the UEBA detection layer, dashboards, and data-quality alerting on top.
- CISA CDM at DOE (completed): data ingestion and quality work across a combined Elasticsearch and Splunk environment.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team building signature, behavioral, statistical, time-series, and ML-based detection content against cloud-scale customer data.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Built detection-as-code orchestration across nine SIEM/EDR platforms — including CrowdStrike and SentinelOne — via native APIs, run through a full GitLab CI/CD pipeline (version control, peer review, automated testing, deployment).
- Created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix; time-series anomaly detection on process chains and authentication behaviors.
- Data engineering for 220+ log sources; used GCP Dataproc/Zeppelin/PySpark for exploratory analysis at scale, including clustering devices on the network by behavioral feature.
- Used Docker to build reproducible detection-testing environments for validating content against real log data.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections; analyzed large-scale security log data to surface anomalous behavior.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Splunk User Certification · Splunk for Analytics and Data Science

Detection Engineering Hiring Team
Instacart

Treating detection like a software discipline — versioned, tested, and deployed through repeatable pipelines rather than ad hoc rule-writing — is the exact model I've built my career around.

At Trend Micro/Cysiv, I built detection-as-code orchestration across nine SIEM and EDR platforms, including CrowdStrike and SentinelOne, through their native APIs, run entirely through a GitLab CI/CD pipeline — version control, peer review, automated testing, and deployment for every rule. I created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix across a complex, multi-source environment, and built the telemetry pipelines for 220+ log sources that fed them.

Currently at Shorepoint, I own the detection and alerting content Treasury's SOC runs live incident response against, and earlier at DOE/NNSA I built an entire security data platform — from raw CrowdStrike, Suricata, and Zeek ingestion through a full UEBA detection layer. That combination of detection-as-code discipline, multi-cloud/EDR telemetry, and hands-on Python automation maps directly to how Instacart's Detection Engineering team operates.

I'd welcome the chance to talk through how that background fits the team's detection coverage roadmap.
