Senior Detection Engineer

Detection engineer with 10+ years building detection-as-code pipelines and telemetry coverage across cloud, endpoint, and SIEM platforms. Built and ran a rules engine covering 2,300+ detections across most of the MITRE ATT&CK matrix, with full CI/CD delivery via GitLab and hands-on automation in Python.

CORE SKILLS

Detection Engineering: Detection-as-code (versioned, tested, CI/CD-deployed) across Splunk, ELK/Elasticsearch, CrowdStrike, SentinelOne, Microsoft Sentinel/Defender, Google SecOps, Sumo Logic, Palo Alto XSIAM, Devo, ArcSight; MITRE ATT&CK coverage mapping; signature, behavioral, statistical, and ML-based detection logic

Telemetry & Cloud: AWS, GCP, Azure telemetry and log pipelines; 220+ ingested log sources; Common Information Model / data-dictionary standardization; Docker for reproducible detection-testing environments

Automation & CI/CD: Python, SQL; GitLab CI/CD detection-as-code pipelines; GenAI-powered triage automation and cross-SIEM rule conversion tooling

Data Science / ML: Clustering and unsupervised ML (device/behavior clustering), time-series anomaly detection, UEBA detection content

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — own the detection and alerting content (Splunk saved searches) the SOC runs day-to-day incident response against.
- DOE/NNSA Security Data Integration (completed): built a new security data platform ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the detection/analytics layer on top — dashboards, data transforms, UEBA content, data-quality alerting.
- CISA CDM at DOE (completed): data ingestion and quality work across a combined Elasticsearch and Splunk environment.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team building signature, behavioral, statistical, time-series, and ML-based detection content against cloud-scale customer data.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Built and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix, delivered through a detection-as-code CI/CD pipeline in GitLab — every rule versioned and tested before deploy.
- Built detection-as-code orchestration across nine SIEM/EDR platforms (including CrowdStrike and SentinelOne) via native APIs, plus GenAI-powered tooling for false-positive triage and cross-SIEM rule conversion.
- Data engineering for 220+ unique log sources; used Docker to build reproducible detection-testing environments validated against real log data.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections; analyzed large-scale security log data to surface anomalous behavior.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Detection Engineering Team
Instacart

A detection-as-code mindset — everything versioned, tested, and deployed through repeatable pipelines — is exactly how I've built detection engineering programs for the last several years, and it's the model I'd bring to Instacart's Detection Engineering team.

At Trend Micro/Cysiv, I built and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix, delivered through a full CI/CD pipeline in GitLab so every rule was versioned, peer-reviewed, and tested before it shipped — no hand-edited console rules. I paired that with data engineering across 220+ log sources spanning cloud, endpoint, and SaaS telemetry, the same kind of multi-source coverage problem your team owns across endpoint, cloud, container, and SaaS.

Currently at Shorepoint, I own the detection and alerting content that Treasury's SOC runs live incident response against, and I previously built an entire security data platform for DOE/NNSA — ingesting CrowdStrike, Suricata, and Zeek log data through to a full UEBA detection layer. I've also built GenAI-powered automation for triage and rule generation, which maps directly onto reducing analyst toil through automation and SOAR-style workflows.

I'd welcome the chance to talk through how that detection-as-code background fits the team's coverage priorities.
