Senior Detection Engineer — SIEM & Security Observability

Senior detection engineer with 10+ years building SIEM detection content, telemetry pipelines, and security observability across nine SIEM/EDR platforms. Deep hands-on Splunk background (certified) paired with detection-as-code delivery through full CI/CD pipelines and MITRE ATT&CK coverage mapping.

CORE SKILLS

SIEM & Detection Engineering: Splunk (certified), ELK/Elasticsearch, CrowdStrike, SentinelOne, Microsoft Sentinel/Defender, Google SecOps, Sumo Logic, Palo Alto XSIAM, Devo, ArcSight; MITRE ATT&CK coverage mapping; detection rule development — signature, statistical, behavioral, aggregation/threshold, ML-based

Telemetry & Log Pipelines: 220+ ingested log sources; 50+ Logstash filters for parsing/normalization; Common Information Model data-dictionary design standardizing field names/types across all parsed data; connector/collector health monitoring

Automation & CI/CD: Python, SQL; GitLab CI/CD detection-as-code pipelines; GenAI-powered triage automation and cross-SIEM rule conversion tooling

Cloud & Data Science: AWS, GCP, Azure; clustering/unsupervised ML, time-series anomaly detection, UEBA detection content

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — own the detection and alerting content (Splunk saved searches) the SOC runs day-to-day incident response against.
- DOE/NNSA Security Data Integration (completed): built a new security data platform ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the detection/analytics layer on top — dashboards, data transforms, UEBA content, data-quality alerting.
- CISA CDM at DOE (completed): data ingestion and quality work across a combined Elasticsearch and Splunk environment.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team building signature, behavioral, statistical, time-series, and ML-based detection content against cloud-scale customer data.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Built detection-as-code orchestration across nine SIEM/EDR platforms — including CrowdStrike and SentinelOne — via native APIs, run through a full GitLab CI/CD pipeline; created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix.
- Data engineering/pipelining for 220+ log sources: 50+ Logstash filters for parsing and normalization, deployed Elasticsearch Beats for log collection, built a Common Information Model standardizing field names/types across all parsed data.
- Developed GenAI-powered tooling for automated false-positive triage and cross-SIEM rule conversion for other detection engineers.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections; analyzed large-scale security log data to surface anomalous behavior.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Detection Engineering Team
Keeper Security

Turning security telemetry into operational value — reducing noise, tuning signal quality, and mapping coverage against MITRE ATT&CK — is the core of what I've built across the last several SIEM detection engineering roles.

At Trend Micro/Cysiv, I built detection-as-code orchestration across nine SIEM and EDR platforms, including CrowdStrike and SentinelOne, through their native APIs, and created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix — all delivered through a full GitLab CI/CD pipeline so every rule was version-controlled and tested. I also built the log parsing and normalization layer myself: 50+ Logstash filters and a Common Information Model standardizing field names and types across every parsed data source, which is the same telemetry-quality problem your Senior Detection Engineer role centers on.

Currently at Shorepoint, I own the Splunk-based detection and alerting content Treasury's SOC runs incident response against day to day, and I hold a Splunk User Certification along with certification in Splunk for Analytics and Data Science. I've also built GenAI-powered automation for false-positive triage and cross-platform rule conversion — the kind of signal-quality improvement your team is scaling.

I'd welcome the chance to talk through how that SIEM and telemetry background fits Keeper's detection maturity roadmap.
