Senior Detection Engineer & Security Data Scientist

Detection engineer with 10+ years building and maintaining SIEM platforms, writing detection content, and investigating security incidents from raw log data through to root cause. Production-grade Python engineer with hands-on experience across nine SIEM/EDR platforms including CrowdStrike, plus deep AWS/GCP cloud security background.

CORE SKILLS

SIEM & Detection Engineering: Building and maintaining SIEM platforms (Splunk, ELK/Elasticsearch); detection rule/alert writing — signature, statistical, behavioral, ML-based; CrowdStrike, SentinelOne, Microsoft Sentinel/Defender, Google SecOps, Sumo Logic, Palo Alto XSIAM, Devo, ArcSight; MITRE ATT&CK coverage

Security Investigations: DNS-based malware detection and mitigation; anomalous-behavior log analysis; entity behavior time-series anomaly detection (auth attempts, process chains); data-quality/health monitoring and alerting

Engineering & Automation: Python (production-grade, reviewed and shipped alongside detection-as-code CI/CD pipelines in GitLab); GenAI-powered security automation for triage and detection generation

Cloud & Data Science: AWS, GCP, Azure; clustering/unsupervised ML (device/behavior clustering), Docker for reproducible detection-testing environments

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — own the detection and alerting content (Splunk saved searches) the SOC runs day-to-day incident response against.
- DOE/NNSA Security Data Integration (completed): built a new security data platform ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the detection/analytics layer on top — dashboards, data transforms, UEBA content, data-quality alerting.
- CISA CDM at DOE (completed): data ingestion and quality work across a combined Elasticsearch and Splunk environment.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team building signature, behavioral, statistical, time-series, and ML-based detection content against cloud-scale customer data.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Built and maintained a next-gen cloud-based SIEM's rules engine — created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix, delivered through a production GitLab CI/CD pipeline.
- Built detection-as-code orchestration across nine SIEM/EDR platforms — including CrowdStrike and SentinelOne — via native APIs, plus GenAI-powered tooling for false-positive triage and cross-SIEM rule conversion.
- Investigated anomalous entity behavior at scale: authentication-attempt anomalies by country/volume, parent/child process chains, and Outlook process-chain analysis.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections on the network; analyzed large-scale security log data to surface anomalous behavior.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Security Team

Quora

A small, high-ownership security team that builds where commercial tools don't fit is exactly the kind of environment I've thrived in — building SIEM detection content and investigating incidents end to end, not just running someone else's playbook.

At Trend Micro/Cysiv, I built and maintained a cloud-based SIEM's rules engine from the ground up, creating and managing 2,300+ detection rules covering most of the MITRE ATT&CK matrix, all delivered through a production Python codebase and GitLab CI/CD pipeline reviewed and shipped alongside other engineers. I also investigated anomalous entity behavior at scale — authentication anomalies, process-chain analysis — the same log-review-to-timeline-reconstruction work central to this role's incident investigations.

Earlier at Experian, I built DNS-based detection and mitigation for malware infections directly, and currently at Shorepoint I own the detection content a live SOC runs incident response against. I've also built GenAI-powered tooling to automate security workflows — triage and detection generation — which maps directly onto the AI-leverage approach your team is taking.

I'd welcome the chance to talk through how that SIEM-building and investigation background fits Quora's security team.
