Senior Security Engineer — Detection & Response

Security engineer with 10+ years running SIEM operations, building detections, and leading incident response — from raw telemetry through triage, containment, and remediation. Deep multi-SIEM/EDR orchestration experience (nine platforms) with production Python engineering and strong SQL-driven security data analysis.

CORE SKILLS

Security Operations & SIEM: SIEM management and logging infrastructure (Splunk, ELK/Elasticsearch); CrowdStrike, SentinelOne, Microsoft Sentinel/Defender, Google SecOps, Sumo Logic, Palo Alto XSIAM, Devo, ArcSight; detection engineering across cloud, endpoint, and identity telemetry

Incident Response: Detection, triage, and remediation of security incidents; anomalous-behavior investigation (auth anomalies, process-chain analysis); data-quality/health monitoring and alerting

Engineering & Data Analysis: Python, SQL for security data analysis; GitLab CI/CD detection-as-code pipelines; GenAI-powered security automation

Cloud & Endpoint: AWS, GCP, Azure cloud security; Docker; comfortable across Mac/Windows/Linux environments as an end user and detection-content builder

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — own the detection and alerting content (Splunk saved searches) the SOC runs day-to-day incident response against.
- DOE/NNSA Security Data Integration (completed): built a new security data platform ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the detection/analytics layer on top — dashboards, data transforms, UEBA content, data-quality alerting.
- CISA CDM at DOE (completed): data ingestion and quality work across a combined Elasticsearch and Splunk environment.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team building signature, behavioral, statistical, time-series, and ML-based detection content against cloud-scale customer data.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Built detection-as-code orchestration and SIEM management across nine platforms — including CrowdStrike and SentinelOne — via native APIs, run through a full GitLab CI/CD pipeline.
- Created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix; used SQL/PySpark/SparkSQL for large-scale security data analysis and investigation.
- Investigated anomalous entity behavior at scale: authentication-attempt anomalies, parent/child process chains, Outlook process-chain analysis.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections; analyzed large-scale security log data to surface anomalous behavior.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Detection Response Team

Vercel

Building the detections and visibility that let a security team act fast and stay ahead of anomalies — not just react to them — is the core discipline I've practiced across the last several SIEM-heavy detection engineering roles.

At Trend Micro/Cysiv, I built and ran SIEM detection-as-code across nine platforms, including CrowdStrike and SentinelOne, delivered through a full GitLab CI/CD pipeline, and created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix. I used SQL and Python daily for security data analysis and investigation, and I've built GenAI-powered automation to strengthen detection coverage without adding headcount — the same enhance-and-scale approach this role calls for.

Currently at Shorepoint, I own the Splunk-based detection and alerting content that drives Treasury's SOC incident response, and I previously built an entire security data platform for DOE/NNSA — from raw log ingestion through a full UEBA detection layer. That end-to-end ownership, from visibility gaps to shipped detections to incident response, is exactly the loop this role runs.

I'd welcome the chance to talk through how that detection and SIEM background fits Vercel's Detection Response team.
