Detection Response Hiring Team

Vercel

Keeping security visibility and logging infrastructure trustworthy — so alerts mean something when they fire — is work I've done across federal and commercial SOC's for the past decade.

At Trend Micro/Cysiv, I built detection-as-code orchestration across nine SIEM and EDR platforms, including CrowdStrike and SentinelOne, through their native APIs, run through a full GitLab CI/CD pipeline, and created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix. I also built the telemetry layer itself: 50+ parsing/normalization filters across 220+ log sources, keeping signal quality high enough to act on.

Currently at Shorepoint, I own the detection and alerting content Treasury's SOC runs incident response against, working hands-on with AWS cloud security and endpoint telemetry to support live investigations and harden internal security posture.

I'd welcome the chance to talk through how that background fits Vercel's CorpSec and detection roadmap.
