Senior Security Engineer — Detection Engineering & Security Automation

Senior detection engineer and security data scientist with 10+ years building detection-as-code orchestration across nine SIEM/EDR platforms — including Google SecOps (Chronicle) — plus real, hands-on GenAI/LLM tooling that automates detection-rule generation, false-positive triage, and cross-platform rule conversion. Currently own detection and alerting content for Treasury's SOC, having previously built a security data and UEBA detection platform from scratch for DOE/NNSA.

CORE SKILLS

Multi-SIEM Detection-as-Code & Orchestration: Google SecOps (Chronicle), Splunk, Microsoft Sentinel, Microsoft Defender, CrowdStrike, SentinelOne, Sumo Logic, Palo Alto XSIAM, Devo, ArcSight — reusable per-platform API adapters, full GitLab CI/CD

GenAI / LLM for Security: Prompt engineering for false-positive triage and detection-content generation; GenAI-driven SIEM API orchestration; reusable GenAI "skills" for cross-SIEM detection-rule conversion

Detection Engineering: Signature, statistical, behavioral, threshold, and ML-based rules; 2,300+ rules across the MITRE ATT&CK matrix; UEBA detection content

Data Science / ML: Python, SQL, PySpark/SparkSQL, GCP Dataproc/BigQuery/Dataflow, clustering, time-series anomaly detection

Cloud & Platforms: AWS, GCP, Azure, Elasticsearch/ELK, Docker

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — current project: build and maintain Splunk saved-search analytics that serve as the SOC's core detection and alerting content.
- DOE/NNSA Security Data Integration (prior project, completed): built a new security data platform ingesting CrowdStrike, Suricata, and Zeek into a central Elasticsearch environment; designed the detection/analytics layer on top — custom dashboards, data transforms, UEBA detection content, and data-quality monitoring/alerting.
- CISA CDM at DOE (prior project, completed): data ingestion and data-quality work across a combined Elasticsearch and Splunk environment.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team building signature, behavioral, statistical, time-series, and ML-based detection content against cloud-scale customer data.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Built and led detection-as-code orchestration across nine SIEM/EDR platforms — including Google SecOps (Chronicle), Splunk, Sentinel, Defender, CrowdStrike, SentinelOne, Sumo Logic, XSIAM, and Devo — via native APIs, run through a full GitLab CI/CD pipeline.
- Developed GenAI-powered tooling for detection engineers: prompt engineering to identify false positives and generate new detection content, plus reusable GenAI "skills" that convert detection rules between SIEM syntaxes.
- Created and managed 2,300+ individual detection rules covering most of the MITRE ATT&CK matrix; built data pipelines for 220+ log sources; authored a Common Information Model data dictionary standardizing fields across all parsed data.
- Ran exploratory data analysis at scale on GCP Dataproc/Zeppelin/PySpark; built time-series anomaly detection for authentication behaviors and process-chain activity.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections; analyzed large-scale security log data to surface anomalous behavior.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Uppercase Research Hiring Team
Google

Turning static detection workflows into self-correcting, LLM-driven pipelines inside Google SecOps is exactly the problem I've spent the last several years solving from the ground up.

At Trend Micro/Cysiv, I built and led detection-as-code orchestration across nine SIEM and EDR platforms — including Google SecOps (Chronicle) itself — through each platform's native API, run end-to-end via a GitLab CI/CD pipeline. On top of that, I developed reusable GenAI-powered tooling for detection engineers: prompt engineering to identify false positives and generate new detection logic, and GenAI "skills" that automatically convert detection rules between SIEM syntaxes — functionally the same problem Uppercase is solving with autonomous rule-writing and tuning agents for YARA-L.

More recently at Shorepoint, I built an entirely new security data platform for DOE/NNSA — from raw ingestion of CrowdStrike, Suricata, and Zeek data through a full UEBA detection layer — and I currently own the core detection and alerting content for Treasury's SOC. The throughline across both is the same: design the data plumbing and the detection logic on top of it, then automate both to scale faster than the threat landscape.

One honest gap: my depth is in building and automating detection content rather than formal security-design-review or system threat-modeling engagements. But the operational discipline of running detection-as-code at scale across nine platforms translates directly to the rigor Uppercase needs in validating agentic detection output before it ships.

I'd welcome the chance to talk through how that background applies to Uppercase's roadmap.
