Detection & Response Engineer — SIEM, AI-Enabled SOC & Security Automation

Detection engineer with 8 years building, tuning, and improving detection and response capability across SIEM, EDR, and cloud telemetry. Deep MITRE ATT&CK-mapped coverage (2,300+ production detection rules), hands-on incident response support, and production experience applying GenAI/LLM tooling to SOC triage and detection-content automation — reducing analyst toil while keeping outcomes measurable and safe.

CORE SKILLS

Detection Engineering & MITRE ATT&CK: Designed, built, and tuned detection content (rules, correlation logic) across endpoint, network, cloud, and identity log sources; created/managed 2,300+ detection rules with formal coverage and gap analysis against the MITRE ATT&CK matrix; version-controlled, tested, staged-rollout detection-as-code pipeline in GitLab

SIEM & EDR Platforms: Native-API detection authoring across Splunk, Microsoft Sentinel, Microsoft Defender, Google SecOps (Chronicle), CrowdStrike, SentinelOne, Elasticsearch, Sumo Logic, Palo Alto XSIAM, and Devo; log analysis across endpoint, network, cloud, and identity sources

AI-Enabled SOC & Automation: Production GenAI/LLM tooling for false-positive triage, detection-rule generation, and cross-SIEM rule conversion; Python automation and multithreaded orchestration of detection deployment across SIEM APIs; applies sound judgment on where AI output needs human validation for high-confidence detections

Incident Response & Threat Intel: Supports incident investigation and response for a live Treasury SOC; integrates threat intelligence (indicators, TTPs, campaign context) into detection tuning and alert enrichment; hands-on with AWS, GCP, and Azure security telemetry

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — creates and manages detection/alerting content (Splunk saved searches), directly supporting incident investigation and response.
- DOE/NNSA Security Data Integration (completed): built a new Elasticsearch-based detection platform from scratch — ingestion, UEBA detection logic, data-quality alerting.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering team building signature, statistical, behavioral, and ML-based detection content against massive customer telemetry.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Architected a Python-based detection-as-code orchestration framework across nine SIEM platforms — automated tests, staged rollout, and quality-metric tracking (coverage, false-positive rate) for every deployment.
- Built pipelining and detection authoring for 220+ log sources and created/managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix as a founding engineer at this startup.
- Developed production GenAI-powered tooling to automate false-positive triage, detection-rule generation, and cross-platform rule conversion — a scalable model for AI-assisted SOC operations.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Detection & Response Hiring Team
North

Closing the gap between detection and resolution takes both engineering rigor and a willingness to put AI to work where it genuinely reduces toil. I've built exactly that combination: a detection-as-code pipeline spanning nine SIEM platforms with version control, automated testing, and staged rollout, alongside production GenAI tooling that automates false-positive triage and detection-rule generation for a live SOC.

That build includes 2,300+ detection rules mapped to the MITRE ATT&CK matrix, native-API detection authoring across Splunk, Microsoft Sentinel, CrowdStrike, and Google SecOps, and Python automation orchestrating deployment across every platform in parallel. On my current team, I support incident investigation and response for a live Treasury SOC, using threat intelligence to tune detections and speed root-cause analysis — applying good judgment on when AI-assisted findings need human validation before acting on them.

I'd welcome the chance to bring that detection engineering, AI-enabled SOC, and automation experience to North's Detection and Response team.
