Senior Security Engineer — Detection Engineering, SecOps & AI-Assisted Automation

Detection engineer and team lead with 8 years building and running detection/SIEM programs, directing sprint priorities for a live SOC's detection and alerting backlog, and shipping production automation — including GenAI-assisted triage and detection-rule tooling — that lets a small team cover more ground without growing headcount linearly. Comfortable moving between hands-on detection work, incident response, and cross-team risk communication.

CORE SKILLS

Detection Engineering & SIEM/Log Monitoring: Multi-SIEM detection-as-code framework across nine platforms (Splunk, Microsoft Sentinel/Defender, Google SecOps, CrowdStrike, SentinelOne, Sumo Logic, Palo Alto XSIAM, Devo) via native APIs; deep, cross-employer Elasticsearch/ELK experience (queries, transforms, Logstash, Beats, native ES detection rules, Kibana); created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix

AI-Assisted Detection & Response Automation: Production GenAI tooling for false-positive triage, detection-content generation, and cross-SIEM rule conversion; prompt engineering for security use cases; used GenAI to interact with SIEM APIs to orchestrate detection content across many customer environments in parallel — direct precedent for scaling a team's coverage through AI-assisted triage/investigation/response workflows rather than headcount growth

Incident Response & Team Leadership: Team lead directing sprint priorities for Treasury SOC's detection and alerting content backlog on the Threat & Research team; supports SOC incident investigation and false-positive analysis; built formal detection-quality metrics (coverage, precision/false-positive rate) and staged/safe-rollout practices before production deployment

Cloud & Identity Security: Hands-on IAM policy/role implementation in AWS and GCP; created and managed API tokens, roles, and permissions across nine SIEM platforms as part of a detection-orchestration framework; Microsoft Sentinel/Defender API orchestration on Azure

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — team lead directing sprint priorities for the detection and alerting content a live SOC's responders investigate against, balancing new coverage work against incident-driven priorities.
- DOE/NNSA Security Data Integration (completed): built a new Elasticsearch-based security data platform from scratch — ingestion, UEBA detection layer, Kibana dashboards, and data-quality monitoring/alerting — a ground-up build owned end to end, not an inherited program.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team building detection content against massive customer telemetry; used threat intel from Vedere Labs during daily triage and false-positive analysis to validate real adversary activity before escalating.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Architected a Python-based detection-as-code orchestration framework across nine SIEM/EDR platforms via native APIs, with automated tests and staged rollout inside a full GitLab CI/CD pipeline — including creating/managing API tokens, roles, and permissions across every platform.
- Built production GenAI tooling for detection-rule generation, false-positive triage, and cross-platform rule conversion — reusable automation that let a small detection team cover more customer environments without proportional headcount growth.
- Built the Elasticsearch-based data engineering layer for 220+ log sources (50+ Logstash filters, multiple Beats deployments, a Common Information Model) and wrote detection rules directly against ES indexes as core content in the team's next-gen ES/Kibana SIEM.
- Created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix; tracked detection-quality metrics (coverage, precision/false-positive rate) with staged rollout before full production deployment.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Information Security Hiring Team
Qualia

Home closings are among the highest-stakes, lowest-margin-for-error transactions most people ever make — which is exactly the kind of environment where detection work has to be both rigorous and fast. Your Information Security Engineering Manager posting describes a team mandate I've been living for the last two years: scale a security team's coverage through automation and AI rather than headcount alone, without losing the pragmatic, business-first judgment that keeps security from becoming a blocker.

On Treasury's SOC, I direct sprint priorities for the detection and alerting content our responders investigate against — balancing new coverage work against incident-driven demands, the same operating rhythm your team runs day to day. At Trend Micro/Cysiv, I built production GenAI tooling that automated false-positive triage and detection-rule generation across a nine-platform detection-as-code framework, letting a small team cover far more ground than headcount alone would allow — directly the kind of AI-assisted triage-to-response workflow you're looking to make the default at Qualia.

I also bring hands-on IAM implementation across AWS and GCP, deep Elasticsearch/SIEM detection-content experience, and a track record of shipping automation that changed how a team worked rather than just documenting the idea. I'd welcome the chance to bring that same automation-first, risk-based approach to Qualia's Information Security team.
