Detection Engineering & Security Tooling Leader — SIEM/SOAR, Vulnerability Management, Multi-Platform Orchestration

Security engineer and technical team lead with 11 years building, tuning, and scaling detection, SIEM/SOAR, and vulnerability-management capability — from founding-engineer buildout of a next-gen SIEM startup to architecting a nine-platform detection-as-code orchestration framework. Deep hands-on ownership of the full security-tooling lifecycle: deployment, telemetry validation, tuning, and measurable quality/coverage outcomes, with real technical team-lead and sprint-lead experience directing delivery across engineering teams.

CORE SKILLS

Security Tooling & Detection Engineering Leadership: Architected and led delivery of a native-API orchestration framework spanning nine SIEM/EDR platforms; directed adoption of automated testing, staged/safe rollout, and formal coverage/false-positive-rate tracking across the engineering team's detection-as-code pipeline (GitLab CI/CD)

SIEM / SOAR / EDR Platforms: Native-API detection authoring and tooling ownership across Splunk, Microsoft Sentinel, Microsoft Defender, Google SecOps (Chronicle), CrowdStrike, SentinelOne, Elasticsearch, Sumo Logic, Palo Alto XSIAM, and Devo; validates telemetry correctness, tuning, and signal-to-noise across every platform deployed

Vulnerability Management & Exposure Data Engineering: Ingests Tenable vulnerability-scan data into SIEM/analytics platforms and builds detection/analytics content on top of it — vulnerability data engineering and exposure analytics, not just scanner administration; hands-on security-control evaluation across many vendor tools

Cloud Security, IAM & Automation: AWS/GCP/Azure security telemetry and IAM policy implementation; Python automation with multithreaded orchestration of detection deployment across SIEM APIs; production GenAI tooling for triage and cross-SIEM rule conversion

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — owns detection/alerting content (Splunk saved searches) as the team's core detection tooling, directly supporting incident investigation and response.
- DOE/NNSA Security Data Integration (completed): built an entirely new Elasticsearch-based detection platform from scratch — ingestion, UEBA detection logic, custom dashboards, and data-quality monitoring/alerting.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering team owning signature, statistical, behavioral, and ML-based detection content and tooling against massive customer telemetry.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Founding engineer who architected a Python-based detection-as-code orchestration framework across nine SIEM platforms — served in a technical team-lead/sprint-lead capacity directing adoption of automated testing, staged rollout, and coverage/false-positive-rate tracking across the engineering team.
- Built pipelining and detection tooling for 220+ log sources and created/managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix as an early hire at this startup.
- Created and managed API tokens, roles, and permissions across nine SIEM platforms as part of the orchestration framework — hands-on access-management/identity work at the platform level.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Analyzed large security datasets to build custom models for emerging-threat identification, including DNS-based malware detection and mitigation across the network.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Cyber Security Hiring Team
Rackspace Technology

Standing up a new observability and vulnerability management team means proving the tooling actually works — that telemetry is complete, controls are tuned, and coverage is measurable — before it means anything else. That's the exact work I've done as a founding engineer building a next-gen SIEM from scratch and later architecting a detection-as-code orchestration framework across nine SIEM and EDR platforms, with automated testing, staged rollout, and formal coverage and false-positive-rate tracking built in from day one.

That build includes native-API detection and tooling ownership across Splunk, Microsoft Sentinel, CrowdStrike, SentinelOne, Elasticsearch, and Google SecOps, plus vulnerability data engineering — ingesting Tenable scan data into analytics platforms and building exposure-analysis content on top of it, rather than just administering the scanner. I've directed delivery in a technical team-lead and sprint-lead capacity throughout, driving the testing and rollout discipline a new security tooling team needs to earn trust fast.

I'd welcome the chance to bring that security tooling, detection engineering, and vulnerability management depth to Rackspace's new observability and vulnerability management team.
