## Machine Learning Engineer — Applied AI & Security Data Science

ML engineer and security data scientist with 12 years of experience (since 2015) training and evaluating ML models — clustering, time-series anomaly detection, and GenAI/LLM-powered automation — against security data at scale. Direct, hands-on experience creating and managing Cribl pipelines. Python/PyTorch/scikit-learn foundation, M.S. Physics (numerical modeling and data analysis).

### CORE SKILLS

---

**Cribl & Data Pipelines:** Hands-on experience creating and managing Cribl pipelines for security/observability data routing; broader pipeline engineering across 220+ log sources (Logstash, Elasticsearch Beats, Apache Beam/GCP Dataflow)

**GenAI / LLM Applications:** Prompt engineering for security use cases (false-positive triage, detection-content generation); GenAI-driven orchestration of SIEM APIs across 9 platforms; built reusable GenAI-powered "skills" automating detection-rule conversion between SIEM syntaxes

**ML & Data Science:** Python, PyTorch, scikit-learn, Pandas, NumPy, SciPy; trained/evaluated unsupervised clustering models (network device behavior); time-series anomaly-detection models (auth/process-chain behaviors); large-scale EDA via PySpark, GCP Dataproc, SparkSQL

**Platforms & Engineering:** Elasticsearch (queries, transforms, native detection rules, API), Kibana, Splunk; GitLab CI/CD pipeline with automated testing and staged rollout; Docker; AWS, GCP, Azure

### PROFESSIONAL EXPERIENCE

---

#### Senior Cybersecurity Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team (current): build and maintain Splunk-based detection/analytics content the SOC runs incident response against.
- DOE/NNSA Security Data Integration (completed): built a new Elasticsearch-based security data platform ingesting CrowdStrike, Suricata, and Zeek; built the UEBA detection layer on ES transforms, plus dashboards and data-quality monitoring.
- CISA CDM at DOE (completed): data ingestion and quality engineering across a combined Elasticsearch and Splunk environment.

#### Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data-science team; built signature, behavioral, statistical, time-series, and ML-based detection models against cloud-scale customer data.

#### Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Trained and evaluated unsupervised ML models for network device clustering as part of a next-gen SIEM's rules engine spanning 2,300+ detection rules across the MITRE ATT&CK matrix.
- Built time-series anomaly-detection models for entity behavior — authentication attempts by country/volume, parent/child process chains, Outlook process-chain analysis.
- Ran exploratory data analysis at scale on GCP Dataproc (PySpark/SparkSQL, Zeppelin notebooks); built GenAI-powered tooling automating cross-SIEM detection-rule conversion and false-positive triage — production LLM tooling, not a research exercise.
- Data engineering: 220+ ingested log sources, 50+ Logstash filters, Common Information Model (CIM) design, GCP Dataflow/Apache Beam for cold-storage retrieval.

#### Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation models for network malware infections; analyzed large-scale security log data to surface anomalous behavior.

### EDUCATION & CERTIFICATIONS

---

M.S. Physics — University of North Texas (2013, Numerical Data Analysis & Modeling) | B.S. Physics — Ball State University (2011; Minors: Mathematics, Astrophysics)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

August 1, 2026

AI Research Team  
Cribl

I've spent real, hands-on time creating and managing Cribl pipelines directly — not adjacent tooling, but Cribl's own observability/data-routing product, the exact system Cribl's AI/ML work is built to extend and orchestrate. That direct product fluency, paired with 12 years training and evaluating ML models against security data, is what draws me to this role.

At Trend Micro/Cysiv, I trained and evaluated unsupervised ML models for network device clustering and built time-series anomaly-detection models for entity behavior — production ML running against cloud-scale customer data on GCP Dataproc (PySpark/SparkSQL). I also built and shipped GenAI-powered tooling: prompt-engineered workflows that let detection engineers query SIEM APIs directly and convert detection rules between SIEM syntaxes automatically — reusable "skills" that turned language-model output into daily production tooling rather than a one-off demo.

My M.S. in Physics gave me a strong numerical-modeling foundation that I've applied through clustering, time-series, and PyTorch/scikit-learn work across every security data platform I've touched since — most recently building the full ingestion-to-detection analytics layer, including Elasticsearch transforms and UEBA content, for a DOE/NNSA security data platform.

I'd welcome the chance to talk through how that Cribl-pipeline fluency and applied ML background could support Cribl's AI Research team.
