Senior Detection & Response Engineer

Detection and response engineer with 12 years of security experience, including 8+ years building custom security data pipelines, multi-platform detection content, and incident response programs across DOE/NNSA, Treasury's SOC, and Trend Micro/Cysiv. Built production ETL pipelines (PySpark, GCP Dataproc, BigQuery, Apache Beam/Dataflow) ingesting 220+ log sources, a nine-platform SIEM/EDR detection-as-code orchestration framework, and currently supports a live SOC's incident queue end to end.

CORE SKILLS

Security Data Engineering & ETL Pipelines: Designed and built production-grade ETL/streaming data pipelines end to end: PySpark and GCP Dataproc for large-scale analysis, BigQuery for warehousing/analytics, Apache Beam/GCP Dataflow for historical and streaming data retrieval; hands-on exposure to Kafka and Flink streaming jobs; pipelining for 220+ unique log sources with a Common Information Model standardizing schema across all parsed data

Detection Engineering, SIEM & EDR: Built and ran custom threat detection systems tuned for low false positives across nine SIEM/EDR/NDR platforms via native APIs (Microsoft Sentinel, Microsoft Defender, Google SecOps/Chronicle, Splunk, CrowdStrike, SentinelOne, Sumo Logic, Palo Alto XSIAM, Devo, plus prior ArcSight) — including CrowdStrike and SentinelOne EDR log onboarding and custom detection/automation build-out; created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix; deep Elasticsearch detection-rule, query (DSL), and transform experience

Incident Response & Security Operations: Actively supports Treasury's SOC (TSSOC) incident/case queue as a Threat & Research team lead, building and managing the Splunk-based detection and alerting content investigators run against; built the UEBA detection layer, dashboards, and data-quality alerting for a security data platform built from scratch at DOE/NNSA ingesting CrowdStrike, Suricata, and Zeek; threat hunting informed directly by threat intel (Vedere Labs CTI)

Automation, Orchestration & Response Tooling: Python-based orchestration framework: multithreaded parallel rule deployment, full GitLab CI/CD with automated tests and staged/safe rollout, tracked coverage/precision/false-positive-rate metrics; production GenAI tooling for false-positive triage and cross-platform rule conversion — a lightweight SOAR-style automation layer

Cross-Domain Depth: Network protocol/NDR telemetry (Suricata, Zeek); multi-cloud (AWS, GCP, Azure — Sentinel/Defender API orchestration); containers (Docker, Kubernetes-orchestrated platform experience); cloud IAM and API token/role/permission management across nine SIEM platforms

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — team lead building and managing the Splunk-based detection/alerting content a live SOC runs incident investigations against; conducts structured incident response and root-cause analysis on flagged cases.
- DOE/NNSA Security Data Integration (completed): built a new security data platform from scratch ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, including the UEBA detection layer, custom Kibana dashboards, and data-quality monitoring/alerting.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team building cloud-based, big-data detection content against massive customer telemetry, tuned using threat intel from Vedere Labs, Forescout's in-house research team.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Built a Python-based detection-as-code orchestration framework across nine SIEM/EDR platforms via native APIs — including CrowdStrike and SentinelOne EDR — with multithreaded parallel deployment across customers, full GitLab CI/CD, automated tests, and staged rollout before production; created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix while tracking and minimizing false-positive rates.
- Designed and built ETL data pipelines end to end for 220+ unique log sources: PySpark/SparkSQL on GCP Dataproc clusters, 50+ Logstash filters, Elasticsearch Beats log collection, a Common Information Model standardizing schema across all parsed data, and a homegrown Apache Beam program on GCP Dataflow for historical cold-storage retrieval.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections on the network; analyzed large-scale security log data to surface anomalous behavior.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Detection & Response Hiring Team
Roblox

Roblox's Detection & Response team needs someone who can design custom security data pipelines, build detection strategies that keep false positives low, and lead real-time incident response — not adjacent skills, but the exact work I've been doing across Experian, DOE/NNSA, Treasury's SOC, and Trend Micro/Cysiv over a 12-year security career.

At Trend Micro/Cysiv, I built ETL data pipelines end to end for 220+ log sources — PySpark and SparkSQL analysis on GCP Dataproc, a homegrown Apache Beam program on GCP Dataflow for historical retrieval, and a Common Information Model standardizing schema across everything ingested — the same shape of work your team needs to keep Roblox's security data pipeline systems running at scale. On top of that data foundation, I built a Python-based detection-as-code orchestration framework spanning nine SIEM and EDR platforms, including CrowdStrike and SentinelOne, with multithreaded parallel deployment, full CI/CD, automated testing, and staged rollout — and created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix while actively tracking false-positive rates.

More recently, at DOE/NNSA I built a security data platform from scratch — ingesting CrowdStrike, Suricata, and Zeek into a new Elasticsearch environment and layering UEBA detection, dashboards, and data-quality monitoring on top — and I currently support Treasury's SOC directly against live incidents as a Threat & Research team lead, building the detection and alerting content investigators run against every day. I'd bring that same combination of pipeline engineering, multi-platform detection ownership, and hands-on incident response to Roblox's mission of keeping its community and enterprise safe.

I'd welcome the chance to talk through how this experience maps to the Principal Detection and Response Engineer role.
