Security Product Researcher — Network Detection Platforms (Zeek/Suricata) & GenAI Security Tooling

Security engineer and data scientist with 12 years of experience building detection and analytics platforms directly on Zeek and Suricata network telemetry, most recently designing a ground-up security data platform for DOE/NNSA from concept to deployment. Hands-on GenAI/LLM prompt engineering for security use cases — generating detection content, triaging false positives, and building reusable AI-powered tooling for detection engineers. Deep detection-content engineering background (signature, behavioral, statistical, and ML-based rules; 2,300+ rules across the MITRE ATT&CK matrix) with the rapid-prototyping, ship-it-to-prove-it instinct this role calls for.

CORE SKILLS

Network Detection Platforms: Zeek, Suricata, CrowdStrike telemetry ingestion and analysis; Elasticsearch full lifecycle — queries, transforms, Beats, native detection rules, API, Kibana dashboarding; OSI-layer network traffic analysis for protocol abuse and attack-pattern detection

GenAI / LLM for Security: Prompt engineering for security use cases — analyzing security data, identifying false positives, generating new detection content; using GenAI to interact with SIEM APIs for detection-content orchestration; built reusable GenAI-powered tooling for detection engineers (e.g., automated cross-SIEM rule-syntax conversion)

Detection Content Engineering: Signature, behavioral, statistical, and ML-based detection rules; MITRE ATT&CK coverage; threat intel integration into detection logic; multi-SIEM detection-as-code orchestration (Splunk, Microsoft Sentinel/Defender, Google SecOps, CrowdStrike, SentinelOne, Sumo Logic, Palo Alto XSIAM, Devo, ArcSight) via GitLab CI/CD with automated testing and staged rollout

Data Science & Engineering: Python, SQL, PySpark/GCP Dataproc/BigQuery/Dataflow; clustering and time-series anomaly detection; security operations, threat hunting, and SOC incident-response support (Splunk, Elastic)

PROFESSIONAL EXPERIENCE

Senior Cybersecurity Engineer — Shorepoint

Oct 2023 – Present

- Designed and built an entirely new security data platform for DOE/NNSA from scratch — ingesting CrowdStrike, Suricata, and Zeek network telemetry into a central Elasticsearch environment and constructing the full analytics/detection layer on top of it: custom data transforms, a UEBA detection layer, custom Kibana dashboards, and data-quality monitoring/alerting content (DOE/NNSA Security Data Integration project, completed).
- Currently create and manage detection/alerting analytics (Splunk saved searches) directly supporting Treasury's Security Operations Center incident response and case work — real-time threat hunting and SOC analytic-content ownership (Treasury SOC / TSSOC, current project).
- Supported data ingestion and data-quality efforts within an Elasticsearch/Splunk environment for DOE's Continuous Diagnostics and Mitigation (CDM) program (completed).

Senior Threat Detection Engineer and Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of a data science and detection engineering team building signature, behavioral, statistical, and ML-based detection content against massive-scale customer network telemetry on a cloud-based big-data platform, with threat-intel integration to tune rule logic and speed alert triage.

Threat Detection Engineer and Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Very early hire who built the rules engine and detection content from scratch for a next-gen cloud SIEM — created and managed 2,300+ individual detection rules covering most of the MITRE ATT&CK matrix, backed by data engineering for 220+ ingested log sources and a Common Information Model standardizing data across all of it.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Analyzed large-scale security log data to build custom detection models — DNS-based malware detection/mitigation and anomalous-behavior discovery across the network.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Hiring Team

Corelight

Corelight's foundation on Zeek and Suricata caught my attention immediately — I've spent the last several years building detection and analytics platforms directly on that same network telemetry, and I'd welcome the chance to bring that background to a team defining what's next for network detection.

At Shorepoint, I designed and built an entirely new security data platform for DOE/NNSA from the ground up: ingesting CrowdStrike, Suricata, and Zeek telemetry into a new Elasticsearch environment, then constructing the full analytics and detection layer on top of it — custom data transforms, a UEBA detection layer, custom dashboards, and data-quality monitoring and alerting. That project ran the full arc this role describes: proving out an idea, building it, and getting it into real use, with the same rapid-prototyping instinct Corelight is looking for.

I also bring hands-on GenAI/LLM experience applied specifically to security work: prompt engineering to analyze security data, identify false positives, and generate new detection content, plus using GenAI to interact directly with SIEM APIs for detection-content orchestration. I've built reusable GenAI-powered tooling for detection engineers — including automating the conversion of detection rules from one SIEM's rule syntax to another's — the kind of AI-for-both-software-and-security-work this role calls for.

That GenAI work sits on top of a deep detection-content engineering foundation: 2,300+ detection rules covering most of the MITRE ATT&CK matrix, a multi-SIEM detection-as-code pipeline orchestrating rule deployment across nine different platforms via their native APIs, and current work directly supporting Treasury's SOC through live incident response and threat hunting.

I'd welcome the opportunity to talk through how that background translates into Corelight's next generation of network security products.
