Senior Data Engineer & Security Data Scientist — Risk Analytics & Detection Content

Senior data engineer/data scientist with 12 years building large-scale data pipelines and applied ML detection content for security platforms — PySpark/GCP Dataproc exploratory analysis at scale, Kafka/Flink streaming exposure, and clustering/time-series anomaly-detection models productionized as live detection rules. Built and operated the ingestion, transform, and orchestration layers behind next-gen SIEM, UEBA, and multi-cloud detection platforms across AWS, GCP, and Azure, with hands-on Python across the full data-to-detection lifecycle.

CORE SKILLS

Data Engineering & Distributed Pipelines: PySpark, SparkSQL, GCP Dataproc, BigQuery, Apache Beam/GCP Dataflow; Kafka and Flink (streaming pipeline exposure); ingestion/normalization for 220+ log sources; Common Information Model / data-dictionary design

Data Science / ML for Security: Python, SQL, advanced mathematics; Pandas, scikit-learn, NumPy, SciPy, PyTorch; clustering/unsupervised ML (device behavior clustering); time-series anomaly detection; UEBA baseline modeling

Cloud & Platform: AWS, GCP, Azure (Sentinel/Defender API orchestration); Docker; GitLab CI/CD detection-as-code pipeline with automated testing, staged/safe rollout, and rule-quality metrics tracking

Detection Engineering & Risk-Scoring Context: Multi-SIEM/EDR detection-as-code orchestration via native APIs across nine platforms — including CrowdStrike, SentinelOne, Microsoft Sentinel/Defender, Google SecOps, Splunk; MITRE ATT&CK-mapped rule development (2,300+ rules); Elasticsearch (queries, transforms, Beats, native detection rules, API)

PROFESSIONAL EXPERIENCE

Senior Cybersecurity Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team (current project) — build and manage the Splunk-based detection/alerting analytics the SOC runs live incident response against.
- DOE/NNSA Security Data Integration (completed): built a new Elasticsearch data platform ingesting CrowdStrike, Suricata, and Zeek telemetry from scratch, plus a UEBA detection layer on custom data transforms, data-quality alerting, and custom dashboards.
- CISA CDM at DOE (completed): data ingestion and data-quality engineering across a combined Elasticsearch/Splunk environment for a federal continuous-monitoring program.

Senior Threat Detection Engineer and Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the data science/detection engineering team building signature, behavioral, statistical, time-series, and ML-based detection content against cloud-scale customer telemetry.

Threat Detection Engineer and Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Ran exploratory data analysis at scale on GCP Dataproc clusters (Zeppelin notebooks, PySpark/SparkSQL, Spark jobs against bucket-stored data) and built ML-based detection content, including device clustering by network behavior and time-series anomaly detection for entity behaviors (auth attempts by country, process-chain anomalies).
- Owned data engineering for a next-gen cloud SIEM at scale — 220+ log sources, 50+ Logstash filters, Elasticsearch Beats collection, and a Common Information Model standardizing field names/types across all parsed data; used Apache Beam/GCP Dataflow to retrieve large volumes of historical cold-storage data.
- Built detection-as-code orchestration across nine SIEM/EDR platforms — including CrowdStrike and SentinelOne — via native APIs through a full GitLab CI/CD pipeline; created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix as a very early startup hire.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Analyzed large-scale security log data to build custom detection models — DNS-based malware detection/mitigation and anomalous-behavior discovery across the network.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011; Minors: Mathematics, Astrophysics)

Splunk User Certification · Splunk for Analytics and Data Science · Johns Hopkins (Coursera): R Programming, The Data Scientist's Toolbox

Risk Analytics Team
CrowdStrike

CrowdStrike's own platform is one of the systems I've already built detection-as-code orchestration against — a fitting starting point for a role centered on turning massive-scale security telemetry into risk intelligence.

At Trend Micro/Cysiv, I ran exploratory data analysis at scale on GCP Dataproc — PySpark, SparkSQL, and Zeppelin notebooks against bucket-stored telemetry — and turned that analysis into production ML detection content: clustering devices by network behavior and building time-series anomaly detection for entity behaviors like authentication attempts and process-chain deviations. I also built the data engineering layer underneath all of it — ingestion and normalization for 220+ log sources, Elasticsearch Beats collection, and a Common Information Model standardizing field names and types across every parsed source. On top of that, I built detection-as-code orchestration across nine SIEM/EDR platforms, including CrowdStrike and SentinelOne, through their native APIs and a full GitLab CI/CD pipeline, creating and managing 2,300+ detection rules across the MITRE ATT&CK matrix.

At DOE/NNSA, I built an entirely new Elasticsearch security data platform from scratch — ingesting CrowdStrike, Suricata, and Zeek telemetry — and layered a UEBA detection system, data transforms, and data-quality alerting on top of it. That combination of large-scale data pipeline ownership and applied ML for anomaly and risk signal detection is the same foundation this team's risk-scoring and posture work is built on.

I'd welcome the chance to talk through how that data engineering and applied ML background fits the Risk Analytics team's roadmap.
