Staff Security Engineer, SecOps & Threats

Detection and automation engineer with deep MITRE ATT&CK-mapped detection content (2,300+ rules) and a Python-based orchestration framework spanning nine SIEM/EDR platforms, built through a full CI/CD pipeline with staged rollout and tracked coverage/precision metrics. Builds the tools that let a security team operate at speed and scale, with hands-on AWS/GCP IAM and live SOC incident support behind it.

CORE SKILLS

Security Automation & Tooling: Python-based detection-as-code orchestration across nine SIEM/EDR platforms via native APIs (Microsoft Sentinel, Microsoft Defender, Google SecOps/Chronicle, Splunk, CrowdStrike, SentinelOne, Sumo Logic, Palo Alto XSIAM, Devo, plus prior ArcSight); full GitLab CI/CD pipeline with automated unit/integration tests, staged/safe rollout, and tracked coverage/precision/false-positive-rate metrics

MITRE ATT&CK & Detection Engineering: Created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix; signature, statistical, behavioral, and ML-based detection content; time-series anomaly detection of entity behavior (auth patterns, process chains) for investigation support

Cloud, IAM & Vulnerability Data: Hands-on IAM policy/role implementation in AWS and GCP; API token/role/permission management across nine SIEM platforms; ingested Tenable vulnerability scan data into a SIEM and built analytics/detection content on top of it; event-driven serverless enrichment on GCP

Incident Response & Threat Intel Integration: Analytically supports a live SOC's case/incident queue (Treasury SOC); builds detection content directly informed by threat intel (Vedere Labs CTI) rather than passively consuming feeds; enriches alerts with CTI context (actor attribution, known-bad indicators) to speed triage

AI-Powered Security Tooling: Production GenAI tooling for false-positive triage and automated detection-content generation/cross-platform rule conversion; reusable GenAI-powered "skills" for detection engineers

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — team lead directing sprint priorities and technical direction for the Splunk-based detection and alerting content a live SOC runs incident investigations against.
- DOE/NNSA Security Data Integration (completed): built a new security data platform from scratch ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the UEBA detection layer, custom dashboards, data transforms, and data-quality monitoring/alerting on top.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team building cloud-based big-data detection content and infrastructure against massive customer telemetry; threat intel sourced from Vedere Labs, Forescout's in-house research team, informed detection tuning.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Architected and built a Python-based detection-as-code orchestration framework across nine SIEM/EDR platforms via native APIs — reusable per-technology adapters for every interaction method (rule management, alerts, tables, schemas) — with multithreading to deploy detection content across many customers in parallel inside a full GitLab CI/CD pipeline, including automated unit/integration tests and staged rollout before full production deployment.
- Created and managed API tokens, roles, and permissions across the nine SIEM platforms; created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix.
- Data engineering/pipelining for 220+ unique log data sources; built production GenAI tooling for detection-rule generation and cross-platform rule conversion; time-series anomaly detection on entity behavior (process chains, authentication patterns) to support investigations.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections on the network; analyzed large-scale security log data to surface anomalous behavior.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science

Security Operations & Threat Management Hiring Team
6sense

Your team's mandate — protecting 6sense through prevention, detection, investigation, and response, while building the tools that let the team operate at speed and scale — maps directly onto how I've spent the last several years: building automation and detection infrastructure, not just running it.

At Trend Micro/Cysiv, I built a Python-based orchestration framework spanning nine SIEM and EDR platforms — Sentinel, Defender, Google SecOps, Splunk, CrowdStrike, SentinelOne, Sumo Logic, XSIAM, and Devo — with reusable adapters, API-level token/role management, and multithreaded parallel deployment, all running through a full GitLab CI/CD pipeline with automated tests and staged rollout. I created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix, and I've used that same ATT&CK fluency to inform investigations and anomaly detection, not just build a rule library.

I currently support Treasury's SOC directly against live incidents, and I build detection content informed by threat intel rather than reacting to it after the fact. I've also shipped production GenAI tooling for false-positive triage and automated rule generation — the same class of AI-powered automation your team is chartered to build.

I'd welcome the chance to talk through how that combination of multi-platform security automation, MITRE ATT&CK-based detection engineering, and live incident response fits 6sense's SecOps & Threats team.
