Staff Security Engineer, Security Operations

Detection and incident-response engineer who builds the automation, not just the runbooks: a Python-based orchestration framework across nine SIEM/EDR platforms, production GenAI tooling for detection triage and content generation, and live SOC incident support. Comfortable owning detection logic end to end — from telemetry pipeline through shipped detection to incident investigation and mentoring.

CORE SKILLS

Detection Engineering & Incident Response: Created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix; signature, statistical, behavioral, and ML-based detection content; analytically supports a live SOC's case/incident queue (Treasury SOC), building content informed directly by threat intel rather than passively consuming feeds

AI-Assisted Security Engineering: Production GenAI tooling for false-positive triage and automated detection-content generation/cross-platform rule conversion; built and validated these AI-assisted workflows against real analyst judgment before trusting the output; reusable GenAI-powered "skills" for detection engineers

Security Automation at Scale: Python-based detection-as-code orchestration across nine SIEM/EDR platforms via native APIs (Microsoft Sentinel, Microsoft Defender, Google SecOps/Chronicle, Splunk, CrowdStrike, SentinelOne, Sumo Logic, Palo Alto XSIAM, Devo); full GitLab CI/CD pipeline with automated tests, staged rollout, and tracked coverage/precision/false-positive-rate metrics

Telemetry & Cloud: Data engineering for 220+ log sources; Common Information Model standardizing field names/types across all parsed data; hands-on IAM policy/role implementation in AWS and GCP; event-driven serverless enrichment on GCP

Threat Intel & Investigation: Time-series anomaly detection of entity behavior (auth patterns, process chains) for investigation support; enriches alerts with CTI context (actor attribution, known-bad indicators) to speed triage

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — team lead directing sprint priorities and technical direction for the Splunk-based detection and alerting content a live SOC runs incident investigations against.
- DOE/NNSA Security Data Integration (completed): built a new security data platform from scratch ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the UEBA detection layer, custom dashboards, data transforms, and data-quality monitoring/alerting on top.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team building cloud-based big-data detection content and infrastructure against massive customer telemetry; threat intel sourced from Vedere Labs, Forescout's in-house research team, informed detection tuning.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Architected and built a Python-based detection-as-code orchestration framework across nine SIEM/EDR platforms via native APIs — reusable per-technology adapters for every interaction method (rule management, alerts, tables, schemas) — with multithreading to deploy detection content across many customers in parallel inside a full GitLab CI/CD pipeline, including automated unit/integration tests and staged rollout before full production deployment.
- Built production GenAI tooling for detection-rule generation and cross-platform rule conversion; time-series anomaly detection on entity behavior (process chains, authentication patterns) to support investigations.
- Data engineering/pipelining for 220+ unique log data sources: 50+ Logstash filters, deployed Elasticsearch Beats for log collection, built a Common Information Model standardizing field names/types across all parsed data.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections on the network; analyzed large-scale security log data to surface anomalous behavior.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science

Security Operations Hiring Team

Etsy

Your posting asks for someone who builds detection logic, leads incidents, and then automates the process with AI where it multiplies impact. That's the exact arc of my last few years — not just running detection content, but building the platform and the AI-assisted tooling underneath it.

At Trend Micro/Cysiv, I built a Python-based orchestration framework spanning nine SIEM and EDR platforms — Sentinel, Defender, Google SecOps, Splunk, CrowdStrike, SentinelOne, Sumo Logic, XSIAM, and Devo — with a full GitLab CI/CD pipeline, automated tests, and staged rollout. I created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix, and I've since built production GenAI tooling for false-positive triage and automated rule generation — running those AI-assisted workflows alongside manual analysis until I trusted the output, the same rigor your posting calls out directly.

I currently support Treasury's SOC directly against live incidents — writing detection logic, leading investigations, and communicating findings to stakeholders — while building detection content informed by threat intel rather than reacting to it after the fact.

I'd welcome the chance to talk through how that combination of detection engineering, AI-assisted security automation, and live incident response fits Etsy's Security Operations team.
