Security Software Engineer, Detection and Response

Detection engineer who builds alerting and automation, not just tickets: a Python-based orchestration framework across nine SIEM/EDR platforms, 2,300+ MITRE ATT&CK-mapped detection rules, and production GenAI tooling for triage and rule generation. Comfortable managing logging pipelines end to end, onboarding new telemetry sources, and hunting for what the rules haven't caught yet.

CORE SKILLS

Detection & Alerting Automation: Python-based detection-as-code orchestration across nine SIEM/EDR platforms via native APIs (Microsoft Sentinel, Microsoft Defender, Google SecOps/Chronicle, Splunk, CrowdStrike, SentinelOne, Sumo Logic, Palo Alto XSIAM, Devo); full GitLab CI/CD pipeline with automated tests and staged rollout; production Python automation, not just scripts

Telemetry & Logging Pipelines: Data engineering/pipelining for 220+ unique log sources; 50+ Logstash filters and Elasticsearch Beats for log collection; Common Information Model standardizing field names/types across all parsed data; connector/collector health monitoring and onboarding

MITRE ATT&CK, Threat Intel & Investigation: Created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix; builds detection content informed directly by threat intel (Vedere Labs CTI); time-series anomaly detection of entity behavior (process chains, authentication patterns) for investigation support; analytically supports a live SOC's incident/case queue (Treasury SOC)

AI-Assisted Security Workflows: Production GenAI tooling for false-positive triage and automated detection-content generation/cross-platform rule conversion, built and validated against real analyst judgment before trusting the output

Cloud & IAM: Hands-on IAM policy/role implementation in AWS and GCP; API token/role/permission management across nine SIEM platforms; event-driven serverless enrichment on GCP

PROFESSIONAL EXPERIENCE

Senior Security Engineer — Shorepoint

Oct 2023 – Present

- Treasury SOC (TSSOC), Threat & Research team — team lead directing sprint priorities and technical direction for the Splunk-based detection and alerting content a live SOC runs incident investigations against.
- DOE/NNSA Security Data Integration (completed): built a new security data platform from scratch ingesting CrowdStrike, Suricata, and Zeek into Elasticsearch, plus the UEBA detection layer, custom dashboards, data transforms, and data-quality monitoring/alerting on top.

Senior Threat Detection Engineer & Data Scientist — Forescout

Aug 2022 – Oct 2023

- Senior member of the detection engineering/data science team building cloud-based big-data detection content and infrastructure against massive customer telemetry; threat intel sourced from Vedere Labs, Forescout's in-house research team, informed detection tuning.

Threat Detection Engineer & Data Scientist — Trend Micro / Cysiv

Sep 2018 – Aug 2022

- Architected and built a Python-based detection-as-code orchestration framework across nine SIEM/EDR platforms via native APIs — reusable per-technology adapters for every interaction method (rule management, alerts, tables, schemas) — with multithreading to deploy detection content across many customers in parallel inside a full GitLab CI/CD pipeline, including automated unit/integration tests and staged rollout before full production deployment.
- Data engineering/pipelining for 220+ unique log data sources: 50+ Logstash filters, deployed Elasticsearch Beats for log collection, built a Common Information Model standardizing field names/types across all parsed data, and assisted building 'Loggify,' a homegrown log parsing/filtering tool that replaced Logstash.
- Created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix; built production GenAI tooling for detection-rule generation and cross-platform rule conversion; time-series anomaly detection on entity behavior (process chains, authentication patterns) to support investigations.

Security Data Scientist — Experian

Jan 2015 – Jan 2018

- Built DNS-based detection and mitigation for malware infections on the network; analyzed large-scale security log data to surface anomalous behavior.

EDUCATION & CERTIFICATIONS

M.S. Physics — University of North Texas (2013) | B.S. Physics — Ball State University (2011)

Security Clearances: Top Secret (current, Treasury) · DOE Q Clearance · Public Trust (DOE)

Splunk User Certification · Splunk for Analytics and Data Science

Security Engineering Hiring Team
Pinterest

Your posting asks for someone who builds alerts and automation, manages logging pipelines, and leverages AI to streamline security engineering — three things I've spent the last several years doing across nine different SIEM and EDR platforms.

At Trend Micro/Cysiv, I built a Python-based orchestration framework spanning Sentinel, Defender, Google SecOps, Splunk, CrowdStrike, SentinelOne, Sumo Logic, XSIAM, and Devo — with reusable adapters, a full GitLab CI/CD pipeline, and staged rollout before anything hit production. Underneath that sits telemetry engineering for 220+ log sources and a Common Information Model standardizing schema across all of it — exactly the kind of logging-pipeline ownership and new-source onboarding your role calls for.

I created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix, and I've built production GenAI tooling for false-positive triage and automated rule generation — running those AI-assisted workflows alongside manual analysis until I trusted the output, not before. I currently support Treasury's SOC directly against live incidents, building detection content informed by threat intel rather than reacting to it after the fact.

I'd welcome the chance to talk through how that combination of detection automation, telemetry pipeline ownership, and AI-assisted security engineering fits Pinterest's Detection and Response team.
