Security Engineering Hiring Team

Pinterest

Your posting asks for someone who builds alerts and automation, manages logging pipelines, and leverages AI to streamline security engineering — three things I've spent the last several years doing across nine different SIEM and EDR platforms.

At Trend Micro/Cysiv, I built a Python-based orchestration framework spanning Sentinel, Defender, Google SecOps, Splunk, CrowdStrike, SentinelOne, Sumo Logic, XSIAM, and Devo — with reusable adapters, a full GitLab CI/CD pipeline, and staged rollout before anything hit production. Underneath that sits telemetry engineering for 220+ log sources and a Common Information Model standardizing schema across all of it — exactly the kind of logging-pipeline ownership and new-source onboarding your role calls for.

I created and managed 2,300+ detection rules covering most of the MITRE ATT&CK matrix, and I've built production GenAI tooling for false-positive triage and automated rule generation — running those AI-assisted workflows alongside manual analysis until I trusted the output, not before. I currently support Treasury's SOC directly against live incidents, building detection content informed by threat intel rather than reacting to it after the fact.

I'd welcome the chance to talk through how that combination of detection automation, telemetry pipeline ownership, and AI-assisted security engineering fits Pinterest's Detection and Response team.
